Urban Complexity and Planning Shih-Kung Lai,Haoying Han,2016-02-17 In recent years there has been a new understanding of how cities evolve and function which reflects the emergent paradigm of complexity The crux of this view is that cities are created by differentiated actors involved in individual small scale projects interacting in a complex way in the urban development process This bottom up approach to urban modeling not only transforms our understanding of cities but also improves our capabilities of harnessing the urban development process For example we used to think that plans control urban development in an aggregate holistic way but what actually happens is that plans only affect differentiated actors in seeking their goals through information In other words plans and regulations set restrictions or incentives of individual behaviour in the urban development process through imposing rights information and prices and the analysis of the effects of plans and regulations must take into account the complex urban dynamics at a disaggregate level of the urban development process Computer simulations provide a rigorous promising analytic tool that serves as a supplement to the traditional mathematical approach to depicting complex urban dynamics Based on the emergent paradigm of complexity the book

provides an innovative set of arguments about how we can gain a better understanding of how cities emerge and function through computer simulations and how plans affect the evolution of complex urban systems in a way distinct from what we used to think they should. Empirical case studies focus on the development of a compact urban hierarchy in Taiwan, China and the USA but derive more generalizable principles and relationships among cities complexity and planning

Urban Economics Arthur O'Sullivan, 2006-01-17 Arthur O'Sullivan's *Urban Economics* is the leading text for this small but exciting market. This book covers urban economics as the discipline that lies at the intersection of geography and economics. The sixth edition is a thorough revision of previous incarnations; the author has reorganized and rewritten every chapter to produce a sleek and up-to-date text that will bring renewed attention to the Urban Economics course. This sixth edition offers an extreme makeover from previous editions while also incorporating the remarkable progress in the field of urban economics in the last ten to fifteen years. Part I of the book explains why cities exist and what causes them to grow or shrink. Part II examines the market forces that shape cities and the role of government in determining land use patterns. Part III looks at the urban transportation system, exploring the pricing and design of public transit systems and the externalities associated with automobile use, congestion, environmental damage, collisions, etc. Part IV uses a model of the rational criminal to explore the causes of urban crime and the spatial consequences. Part V explains the unique features of the housing market and examines the effects of government housing policies. The final part of the book explains the rationale for our fragmented system of local government and explores the responses of local governments to intergovernmental grants and the responses of taxpayers to local taxes. All of the economic concepts used in the book are covered in the typical intermediate microeconomics course but a *Tools of Microeconomics* appendix is included that covers the key concepts for students whose exposure to microeconomics is limited to an introductory course or who could benefit from a review of intermediate concepts.

The Periphery in the Knowledge Economy Mario Polèse, Richard Shearmur, INRS-Urbanisation, Université de Moncton. Canadian Institute for Research on Regional Development, 2002. Since the early 1980s most peripheral regions of Eastern Canada have seen their population and employment levels stagnate then decline. However, these trends illustrated by the first results of the 2001 census are characterised by strong discontinuities: mine closures, collapse of fish stock, but also by counter-trends: dynamic entrepreneurship success in some regions. In this book the authors examine the economy and geographic processes which underlie these trends and address the following questions: are these processes specific to Eastern Canada or are they more general? Are all peripheral regions on an equal footing with respect to the trends towards metropolisation and increasing international trade? Are there any policy approaches which may counteract some of the effects of these structural trends? P 4 of cover

Planning within Complex Urban Systems Shih-Kung Lai,2020-12-17 Imagine living in a city where people could move freely and buildings could be replaced at minimal cost Reality cannot be further from such Despite this imperfect world in which we live urban planning has become integral and critical especially in the face of rapid urbanization in many developing and developed countries This book introduces the axiomatic experimental approach to urban planning and addresses the criticism of the lack of a theoretical foundation in urban planning With the rise of the complexity movement the book is timely in its depiction of cities as complex systems and explains why planning from within is useful in the face of urban complexity It also includes policy implications for the Chinese cities in the context of axiomatic experimental planning theory
