Reimagining Nigeria's Educational System Joseph A. Balogun,2023-09-20 This book assesses the challenges within the Nigerian educational system and provides a concrete plan to revitalize the low performing system by strengthening high stakes testing at all levels In Nigeria many citizens believe that the solution to the country s low performance in education is to eliminate high stakes standardized testing High stakes testing refers to applying standardized student achievement tests as a primary mechanism to evaluate students teachers and their school s performance This book argues that the poor quality of education and low ranking of Nigeria s educational system is not related to the negative consequences of high stakes testing but rather is due to many intrinsic factors By conducting a comparative analysis of six high performing education systems worldwide the book offers a comparative summative evaluation of the educational system and offers recommendations This book will be of interest to policymakers and scholars in the fields of African education higher education quality and global studies African studies management and administration leadership and professional development studies Joseph Abiodun Balogun is former Dean and retired Distinguished University Professor at the College of Health Sciences Chicago State University USA Visiting Professor Program Consultant at the Centre of Excellence in Reproductive Health Innovation University of Benin Nigeria and President CEO Joseph Rehabilitation Center Tinley Park Illinois USA

the power to choose their leaders But now this balance has shaken loose As the market consolidates the lines between big business and the halls of Congress have become razor thin Private companies have become as powerful as countries As Walter Isaacson said about Alec Ross s first book The Industries of the Future The future is already hitting us and Ross shows how it can be exciting rather than frightening Through interviews with the world s most influential thinkers and stories of corporate activism and malfeasance government failure and renewal and innovative economic and political models Ross proposes a new social contract one that resets the equilibrium between corporations the governing and the governed

Immerman,Jeffrey A. Engel,2020-06-23 When the United States entered World War I President Woodrow Wilson declared to Congress that the

objective was not merely to bring a new balance of power but rather to bring a just and secure peace to the world by the end of the conflict. In this famous speech known as The Fourteen Points, Wilson offered the world a road map toward a more equitable international system in the midst of unprecedented global conflict, including ideas on the interconnectedness of democracy, trade, and the concept of a forum for peaceably resolving international disputes. Even decades after the end of the First World War, Wilson's ideas remained important and influenced many of his successors. But now in the twenty-first century, there are forces at work in the world that Wilson could never have imagined, and those forces call for a new plan toward peace. In *Fourteen Points for the Twenty-First Century: A Renewed Appeal for Cooperative Internationalism*, Richard H. Immerman and Jeffrey A. Engel bring together a diverse group of thinkers who take up Wilson's call for a new world order by exploring fourteen new directions for the twenty-first century. The contributors—scholars, policymakers, entrepreneurs, poets, doctors, and scientists—propose solutions to contemporary challenges such as migration, global warming, health care, food security, and privacy in the digital age. Taken together, these points challenge American leaders and policymakers to champion an international effort not to make America great again but to work cooperatively with other nations on the basis of mutual respect.

A Search for Solvency Alfred E. Eckes, 2014-07-03. Diverted by the dramatic military and political events of July 1944, few Americans realized the significance of an international conference taking place at Bretton Woods, a mountain resort in New Hampshire far from the battle zones. There, United Nations experts were completing plans for a world monetary and financial system that they hoped would create a prosperous, efficient global economy and avert economic tensions that might lead to another world war. Until the dollar crisis of 1971, decisions made at Bretton Woods provided the institutions and rules for international finance. The conference ushered in an era of unprecedented expansion of world trade and prosperity. Based on extensive research in previously unavailable sources, *A Search for Solvency* relates intriguing and often complicated issues of economic analysis and diplomatic history. It offers a succinct and comprehensive survey of international monetary development from the collapse of the pre-World War I gold standard to the devaluation of the dollar in 1971. In effect, it explains the origins of late twentieth-century global inflation and currency problems. The author details how the ghost of the Great Depression, the failure of monetary reconstruction efforts after World War I, and the memory of the nineteenth-century gold standard guided efforts to construct the Bretton Woods system. This preoccupation with the past, as well as political constraints, produced a monetary system protected against past dangers: fluctuating currencies, controls, and deflation, but dangerously vulnerable to inflationary pressures. The weaknesses of Bretton Woods, a system geared to an era in which economic power was concentrated in the United States, became visible in the 1960s and painfully apparent by the mid-1970s.

Shaping the Developing World Andy Baker, 2021-01-07. Why are some countries rich and others poor? Colonialism, globalization, bad government, gender inequality, geography, and environmental degradation are just some of the potential answers to this complex question. Using a threefold framework of the West, the South, and the natural world, *Shaping the*

Developing World provides a logical and intuitive structure for categorizing and evaluating the causes of underdevelopment. This interdisciplinary book also describes the social, political, and economic aspects of development and is relevant to students in political science, international studies, geography, sociology, economics, gender studies, and anthropology. The Second Edition has been updated to include the most recent development statistics and to incorporate new research on topics like climate change, democratization, religion, and prosperity, the resource curse, and more. This second edition also contains expanded discussions of gender, financial inclusion, crime, and police killings and the Middle East, including the Syrian Civil War.

The Post-Pandemic Business Playbook Ofer Mintz, 2022-02-12. COVID-19 forced a dramatic change to customer behavior that resulted in an economic crisis not witnessed by anyone alive. Businesses can no longer operate as before because their customers are no longer operating as before. This book provides customer-centric based guidance for how businesses should adapt to this new reality, deriving insights from academic research, case studies, interviews, and best practice examples from around the world. As validated by hundreds of top-level executives, its readers will gain a better understanding of why customer behavior has changed so they can use the book's solutions to navigate through and succeed in the post-COVID-19 future.

Civil War and Uncivil Development David Maher, 2018-03-15. This book challenges the conventional wisdom that civil war inevitably stifles economic development and that civil war represents development in reverse. While some civil wars may have adverse economic effects, Civil War and Uncivil Development posits that not all conflicts have negative economic consequences and under certain conditions, civil war violence can bolster processes of economic development. Using Colombia as a case study, this book provides evidence that violence perpetrated by key actors of the conflict, the public armed forces, and paramilitaries has facilitated economic growth and processes of economic globalisation in Colombia, namely international trade and foreign direct investment, with profoundly negative consequences for large swathes of civilians. The analysis also discusses the development in reverse logic in the context of other conflicts across the globe. This book will be an invaluable resource for scholars, practitioners, and students in the fields of security and development, civil war studies, peace studies, the political economy of conflict, and international relations.

A Triple Bottom Line Analysis of Global Consumption Joy Murray, Anne Owen, Moana Simas, Arunima Malik, 2022-05-25. This book adds a whole new dimension to the editors' previous work on the social, economic, and environmental effects of global trade. For the first time, it brings all three pillars of sustainability together into one coherent, multiregional input-output MRIO framework. It shows the power of MRIO analysis to illuminate the local and global interdependencies of economic, environmental, and social systems and the benefits to be gained through analysing all three together. Change one thing and everything else changes. With chapters from around 60 researchers across 34 countries, this book illustrates the effect of natural resources and government policy settings, 1990-2015, on the balancing act that was and is global trade. It provides a holistic systems view of how supply chains work, revealing how easily they can become fragmented and out of kilter. And within all the chaos of COVID-19, it shows how MRIO

is the one tool that can help rebuild a post pandemic global economy into a fairer safer world **The Complexity of Human Rights** Philip Alston, 2024-02-08 This book provides the first systematic assessment from a human rights law perspective of the landmark contributions of the renowned legal anthropologist Sally Engle Merry What impact does oversimplification have on human rights debates The understandable tendency to present them as a single universal and immutable concept ignores their complexity and by extension only serves to weaken them Merry and her colleagues transformed human rights thinking by highlighting the process of vernacularization which sees rights discourse as being unavoidably dependent upon translation and interpretation She also warned of the pitfalls of excessive reliance upon statistical and other indicators through the process of quantification Here the leading voices in the field assess the significance of these contributions **Greenhouse Gas Control Technologies** B. Eliasson, P. Riemer, A.

Wokaun, 1999-05-20 These proceedings contain 270 papers outlining ideas and contributions to the new scientific technical and political discipline of Greenhouse Gas GHG Control The contributions were presented at the 4th International Conference on Greenhouse Gas Control Technologies GHGT 4 It was the largest gathering of experts active in this new and fast developing field GHGT 4 was different from its predecessors in that it included all greenhouse gases not only CO₂ and all issues which could contribute to the mitigation of the greenhouse problem technical economic and political The main focus was on practical solutions and real demonstrations of mitigation technology being planned and implemented today It also addressed ways to increase the efficiency of power production and utilisation and looked at proposals to encourage the development of renewable energy sources During the Opening Session 10 keynote addresses were heard from prominent personalities in government industry and academia To tackle this very inter disciplinary problem and to achieve acceptable solutions it is essential for industry and government to initiate intense dialogue and cooperation Conferences like this can provide the opportunity for a meeting of minds between engineers and politicians in the face of global challenge The primary attributes of this global challenge are manifold the problem is global and international it is inter disciplinary both in substance and approach it covers technical political and economic issues and involves government science industry and academia it is complex and non linear and it will take the efforts of all parties involved to solve the problem These proceedings contain ideas for starting demonstration projects and for making better use of the power and flexibility of market measures They also show it is a problem we can influence and that there is a wealth of ideas The challenge now is to find the right partners to put these ideas into action
