Workplace Monitor Training: Specific hazards monitoring ,1985 Safe Work Practices for the Environmental
Laboratory Frank R. Spellman,1998-10-02 Make your environmental lab and lab technicians work practices the safest
possible Protect workers from hazardous material they handle on site Protect the civilian population from harm in a
hazardous materials emergency Prevent accidents before they happen The purpose of Safe Work Practices for the
Environmental Laboratory is twofold 1 For the person designated as the laboratory's Chemical Hygiene Officer or Safety
Officer this text is a user friendly reference that will provide a format a template a guide to compliance with OSHA's
Laboratory Standard 29 CFR 1910.145 and 2 for the person who is assigned to work in the environmental laboratory this
user friendly text provides the information needed not only to perform routine laboratory tasks correctly but also to perform
them safely The environmental lab is involved with performing analytical testing and sampling protocols relating to air soil
biosolids sludges drinking water wastewater groundwater stormwater waste characterization petroleum products and HRSD
NPDES effluent studies Many wastewater treatment plants and water works have their own environmental laboratories
These labs primarily perform analysis of process conditions to ensure optimization of the process However even these small
labs a few are quite large perform environmental sampling and therefore are environmental labs The actual genesis of the
environmental laboratory can be attributed to the environmental regulations that have been generated by USEPA AOAC
ASTM NIOSH OSHA and other regulatory and advisory entities The typical environmental laboratory contains several
different types of hazards the lab worker must guard against This is the case even though modern environmental laboratories
have been designed to take maximum advantage of engineering controls that work to engineer out most hazards The main
hazard discussed in this text has to do with hazardous materials dangerous chemicals and compounds and the effect they can
have on work practices OSHA is quite specific in regard to protecting the laboratory worker from harm that could result from
handling hazardous materials these specifics are discussed in detail throughout this text It is important to point out that this
text will provide the user with more than just a safety book For example this text provides the user with a sample Chemical
Hygiene Plan it discusses various safe work practices for standard operating procedures normally performed in the
environmental laboratory and it discusses procedures to use for emergency response activities such as clean up of chemical
spills The bottom line is that probably the most important benefit to be derived from using this text is the exposure the user
receives to the lessons and examples presented throughout the text these lessons learned and examples provide information
on how to make your environmental laboratory and the performance of your individual work practices safer When you get
right down to it isn't this what a safety text should be all about
