Sequence

A butterfly starts its life as a very small, round, oval or egg. They usually lay their eggs on leaves. In the second stage of the butterfly life cycle, the hatched larva or caterpillar eats the leaf it was attached to as an egg. In this stage they spend most of their time eating leaf long after becoming caterpillars, they form themselves into a pupa (also known as a chrysalis). The caterpillar is rapidly changing inside. When the caterpillar has done all of its forming and changing inside the pupa, if you are lucky, you will get to see an adult butterfly emerge.

- First, the butterfly starts as an egg.
- Second, it becomes a caterpillar (larva).
- Third, they form themselves into a pupa.
- Finally, they emerge as a butterfly.
