SHEET****MODEL 444
COMMUNICATIONS
MICROPHONE****CONTROLLED MAGNETIC[®] COMMUNICATIONS MICROPHONE****GENERAL**

The Model 444 is a pressure-operated CONTROLLED MAGNETIC[®] microphone. It is specifically designed for radio communication applications and provides optimum performance from single sideband transmitters as well as AM and FM units. The response cuts off sharply below 300 and above 3,000 Hz, with a rising characteristic to 3,000 Hz. This special response characteristic results in optimum speech intelligibility and audio punch to cut through noise and interference.

Microphone Features:

- A response tailored for single sideband transmissions
- A switch for instantaneous selection of Press-to-Talk or VOX (voice-operated relay control) operation
- Finger-tip control bar (locking or non-locking action) to actuate microphone and an external relay or control circuit
- Long-life switch to satisfy severe requirements of communication systems
- Adjustable microphone height
- A sturdy, high impact, ARMO-DUR[®] base and microphone case
- Dependability—under all operating conditions

PRESS-TO-TALK SWITCH OPERATION

The finger-tip control bar can be used as a locking or nonlocking switch. To use as a nonlocking switch, simply depress the control bar and release after transmission. To use as a locking switch, depress the control bar and pull it forward. To unlock the switch, move the bar back and release.

NORMAL-VOX OPERATION

Most amateur equipment is wired to use either VOX (voice-operated relay control) or a Press-to-Talk switch. Model 444 has been designed to provide maximum flexibility for both types of operation. VOX or Press-to-Talk operation may be easily selected by the Normal-Vox slide switch on the bottom side of the microphone base near the cable entry.

For Press-to-Talk operation of the microphone, the Normal-Vox switch should be in the "Normal" position. For VOX operation, the Normal-Vox switch should be in the "VOX" position, and the Press-to-Talk switch must be locked in the On position.

**CONNECTIONS**

Model 444 is designed for use with transmitters or amplifiers having high-impedance inputs. The BLACK cable lead is the "hot" conductor for the microphone circuit; the WHITE cable lead controls an external relay circuit. The shield is common to both the microphone circuit and the external relay circuit. The shield should be securely grounded to the amplifier or transmitter chassis ground. (See Figure 1 for internal wiring diagram of Model 444.)

**IMPORTANT**

Shure Microphone Cables are selected after exhaustive tests to insure superior performance in microphones because of low capacitance, superior shielding properties and unusually long life under severe use.

Cables with plastic insulation should not be subjected to expensive soldering-iron heat. Carefully clean and tin the conductors and the connections to which the conductors are to be soldered. The soldering operation can then be done with a minimum of heat, thereby avoiding any possibility of damage to the cable.
