Abstract: *The safety investigation agency is a modern concept introduced in the transportation branch by ICAO, since Annex 13 to the Chicago Convention requires a separate safety investigation to be conducted by a Member State in case of serious occurrences, accidents and incidents, the main purpose being preventing future similar occurrences and increasing the safety level of the air operations. Such a body is subject to various tasks and limitations supporting the achievement of its targets, it is not a manufacturer or service supplier and it is not similar to other kind of governmental agencies. This paper should provide a model to develop guidance on QMS applied to the very specific case of a civil aviation safety investigation agency.*

Key Words: *Quality Management, independent safety investigation, national law, governmental agencies, civil aviation*

1. INTRODUCTION

The Annex 13 to Chicago Convention on International Civil Aviation is supporting the independent safety investigation conducted by member States in case of severe occurrences, such as accidents and serious incidents.

The investigation has to be independent from other type of investigations required by law, such as judicial, police, labor health and safety, security and law enforcement bodies, enabling to determine proper measures to be applied to avoid further occurrence of similar events, measures to be applied by safety oversight agencies and different economic operators involved such as air carriers, aircraft manufacturers, and aerodromes operators [1], [2], [3].

Even if the investigations have to be independent, cooperation between investigation bodies/ agencies/ authorities is encouraged.

Due to different reasons mainly economics and social, some ICAO member States created also regional bodies to facilitate these investigations and/or to enable proper cooperation of different agencies, mainly from different States.

Currently there is a trend for governments to introduce such agencies for further branches of transportation: maritime and shipping, rail and road.

The Romanian Civil Aviation Safety Investigation and Analysis Authority (SIAA)/ Autoritatea de Investigatii si Analiza pentru Siguranta Aviatiei Civile (AIAS) is the national

Construction Materials Manual Manfred Hegger, Volker Auch-Schwelk, Matthias Fuchs, Thorsten Rosenkranz, 2013-02-12 Until now, the few existing systematic texts on construction materials have primarily been directed at building engineers. An overview for architects, which also considers the importance of construction materials in the sensory perception of architecture, including tactile qualities, smell, color, and surface structure, has not been available. With the publication of the Construction Materials Manual, all that has changed. As a basic work aimed equally at the questions and perspectives of architects and building engineers, it will bring together all of the above-mentioned viewpoints. It addresses fundamental questions of sustainability, including life span, environmental impact, and material cycles, while also presenting material innovations. All of the principal conventional and innovative construction materials are comprehensively documented, with attention to their production, manufacture, fabrication, treatment, surfaces, connections, and characteristics. International examples help to illustrate their use in architecture, where a building's appearance is often defined by a single material. Thus, the Construction Materials Manual will support the daily work of architects and engineers in the choice of construction materials in a comprehensive and at the same time vivid and stimulating manner.
