Cisco Systems Hardware and Software Requirements

- Hardware (Cisco 2621 Gateway): 2M FT T1 Port

Key Features Not Supported

Calling/Called Name

Limitations

Calling Name and Number feature

- Calling Name delivery and presentation features are not supported by the Siemens Hicom 300 E CS PBX.

- When calling from Cisco 7960 IP phone to Siemens digital phone, Calling/Called Number is displayed on both phones after the call is answered.
- When calling from Siemens digital phone to Cisco 7960 IP phone, IP phone displays Connected Number after the call is answered. Siemens phone however does NOT get updated when the call is answered. It displays the dialed numbers instead. (i.e. Access Code + extension number). It was verified using ISDN protocol analyzer that the CallManager was not sending "Connected Number" information in the connect message back to PBX.
- When a call is answered, the display on the Siemens phone is only active (Calling Number displayed) for approximately 4 seconds. Thereafter, the screen goes blank. This could be caused by a timer feature that is expiring for the display.

User/Network Settings

The Cisco 2621 router with ISDN switch type setting of **primary-ni** supports both protocol sides by using the "isdn protocol-emulate network/user" command. When the router is set to emulate Network side and the Siemens is set to emulate User
