PC Magazine, 2003, *Network of the Future - with Equipment Forecasts* Clifford R. Holliday, 2016-02-01. The purpose of this report is to forecast the future 2016-2021 of the North American telecommunications network and from that forecast to identify the major equipment needs to fulfill that forecast. There has been a great deal of turmoil in the area of telecommunications, much of it leading to spectacular changes and advances. Turmoil has been created by technological changes, by regulatory changes, by the development of new products and applications, by the introductions of new or new flavors of services and by the entry of non traditional competitors. This report will use the technique of asking the experts for their view of the future and then distilling from that input some of which will

be contradictory a consistent unified organized view of the next five years of telecommunications in North America The first chapter will describe the survey that was used to ask the experts After that the reader will be presented with several of the raw answers for the responders to the survey It is intended to give the reader a first hand view of some of the material in the responders words Following the raw answers sample the author will provide a summary and analysis of the answers and then the resulting forecast for the future of the network Finally this general forecast will be used to provide specific equipment forecasts for this period This will be accomplished by combining the Forecast of the Future Network that we have constructed with the Survey with information about forecast of traffic demand and likely investment supply The report will thus produce detailed forecasts for the major types of equipment used in optical networks A description of the makeup and function of each type of equipment will precede the forecast At the end of the report a listing of major vendors that provide this equipment is provided as well as Appendixes to assist in understanding traffic concepts
