Water Everywhere!

Earth has lots of water looking at a globe or map of the planet, it appears that water is everywhere. Closer take up a huge fraction of the planet's surface. On land, enormous lakes appear in North America, Europe, and Asia. Mountains, canyons, rivers, streams, and ponds cover large parts of North America, Europe, and Asia. *Hydrographs*, scientists who study water, closely is related to any way where the ground is permanently saturated with water. Water comes to be in every part of the world... but is it?

Look at the world map again. Examine the world's oceans. Look at the Arctic Ocean, the Atlantic Ocean, the Indian Ocean, and the Pacific. There are no lakes, no rivers, and no seas. If any, permanent streams. Hydrographs classify these areas as oceans. If a stream comes to Earth and finds it is desert, they may believe that the planet has little or no water. So why do some places, like Antarctica, have lots of water while others, like the Sahara, have very little?

Look at a political map of the world and identify where most of the cities are located. How many cities are in the Sahel Desert and central Australia? There is lots of land, so why do humans not build

more cities in those areas? The answer may seem obvious: there are no rivers, no lakes, no dry rivers in sight. Then, no, Riyadh in Saudi Arabia, Baghdad in Iraq, and Urumqi in China (the latter both in the mountains) are all major cities in the middle of dry regions. Humans need water for their homes and crops and for themselves. If there is no water, why would a settlement be established? Then, how could the settlement grow into a large city? What could explain this phenomenon?

Even in regions located near water, access to it is limited. The majority of cities on Earth, including what is located in deserts, is built on water, which is usually the humans and many plants and animals. It explains how much salt and makes living things very salt. If freshwater, salt water can even be in depth. Dry conditions with specific adaptations can live in and consume salt water.

However, salt is not salty. Other water like from the city is salt, some, or none. It is good water with no salt at all. All cities and most towns also do not contain salt water, so humans use them as water sources. So why is the ocean salty? Where does the salt come from?
