Microenteric settling is highly heterogeneous due to water depth, particle velocity, and the "settling" environment. Many conditions contribute to the particle's ability to settle. The particle's size, shape, and density are the most important factors. The particle's size and shape are the most important factors. The particle's density is the most important factor.

This laboratory reports the effect of 17 $\beta$ -estradiol on the expression of the estrogen receptor in the uterus of the female rat. The results show that the expression of the receptor is increased by the treatment with estradiol. The results are discussed in the context of the role of the receptor in the regulation of the estradiol response.

**Survival Guide for Scientists** Ad Lagendijk, 2008 During the course of Dutch physicist and Spinoza Prize winner Ad Lagendijk s long and influential career he has published more than 300 articles supervised over thirty doctoral dissertations and given countless presentations and conference addresses Over the years his incisive consultations tips and rules for scientific study

have proven themselves so beneficial to the emerging young scientists under his watch that he has been inundated with requests for a written version. Aimed primarily at undergraduate, graduate and postdoctoral students in the natural sciences, *Survival Guide for Scientists* presents Lagendijk's practical how-to advice on essential topics such as the foundations for writing scientific texts, presenting data and research information and writing and reading collegial e-mails. Each section is organized by a collection of short rules outlined and numbered in a logical order as self-explanatory pieces of information, allowing the reader the freedom to study any number of them in any desired order. These concrete guidelines are all supplemented by an extensive index that forms a reference text of its own with easy navigation, securing a place for the *Survival Guide for Scientists* on the shelves of scientific scholars and students alike. **Scientific English** Robert A.

Day, Nancy Sakaduski, 2011-06-16 This entertaining and highly readable book gives anyone writing in the sciences a clear and easy-to-follow guide to the English language. English is often regarded as one of the most difficult languages to master. Yet while the English language has a vocabulary of upwards of 500 000 words, it only uses nine parts of speech and all of these words fall into one or more of those nine categories. *Scientific English: A Guide for Scientists and Other Professionals* Third Edition contains many simple revelations like this that make effective scientific writing in English easy even for those whose fluency is in another language. The book is organized around a basic guide to English grammar that is specifically tailored to the needs of scientists, science writers, science educators and science students. The authors explain the goals of scientific writing, the role of style and the various kinds of writing in the sciences, then provide a basic guide to the fundamentals of English and address problem areas such as redundancies, abbreviations and acronyms, jargon and foreign terms. Email, online publishing, blogs and writing for the Web are covered as well. This book is designed to be an enlightening and entertaining read that can then be retained as a practical scientific writing reference guide. *Science Writing: an Interactive Field Guide for Students* Paul Stupples, 2017-10-06

Scientific writing can be difficult. This is especially true for students at the beginning of their course when the challenge of coming to terms with the scientific or technical aspects of a subject seems more important than the need to write clearly and consistently. This interactive field guide will help you to identify and correct some of the mistakes commonly made by inexperienced writers and so ensure that your lab report, essay, term paper, dissertation or thesis has the best chance of achieving a high grade. **From Research to Manuscript** Michael Jay

Katz, 2009-08-29 *Observations Plus Recipes* It has been said that science is the orderly collection of facts about the natural world. Scientists, however, are wary of using the word fact. Fact has the feeling of absoluteness and universality, whereas scientific observations are neither absolute nor universal. For example, 'children have 20 deciduous baby teeth' is an observation about the real world, but scientists would not call it a fact. Some children have fewer deciduous teeth and some have more. Even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood. When they are babies and toddlers, children have less than 20 visible teeth and as they grow older, children begin to lose their deciduous

teeth which are then replaced by permanent teeth Children have 20 deciduous baby teeth is not even a complete scientific statement For one thing the statement children have 20 deciduous teeth does not tell us what we mean by teeth When we say teeth do we mean only those that can be seen with the unaided eye or do we also include the hidden unerupted teeth An observation such as children have 20 deciduous teeth is not a fact and by itself it is not acceptable as a scientific statement until its terms are explained scientifically children have 20 deciduous teeth must be accompanied by definitions and qualifiers
