Frontiers in Neurorobotics - Editor's Pick 2021 Florian Röhrbein, 2021-06-24 *All in the Mind?* Peter Clarke, 2015-05-15 Much progress has been made to understand the intricacies of the brain's workings. Some have claimed and many assumed that these findings have challenged faith in God to the point of destruction. Are we not mere neural machines? Are religious experiences not just in the mind, the products of abnormal brain events? Is faith not just a side effect of evolution? Not so, according to neuroscientist Peter Clarke after a lifetime's study of the brain. In this comprehensive book, the current state of neuroscientific evidence is weighed up alongside ideas of what it means to be human, the idea of the soul, near-death experiences and questions of free will and responsibility. He engages with the leading thinkers in these areas including Francis Crick, Richard Dawkins, Daniel Dennett, Sam Harris and Daniel Wegner.

Structures and Architecture Paulo J. da Sousa Cruz, 2016-10-14 Although the disciplines of architecture and structural engineering have both experienced their own historical development, their interaction has resulted in many fascinating and delightful structures. To take this interaction to a higher level, there is a need to stimulate the inventive and creative design of architectural structures and to persuade architects and structural engineers to further collaborate in this process, exploiting together new concepts, applications and challenges. This set of book of abstracts and full paper searchable CD-ROM presents selected papers presented at the 3rd International Conference on Structures and Architecture Conference ICSA2016 organized by the School of Architecture of the University of Minho, Guimarães, Portugal, July 2016, to promote the synergy in the collaboration between the disciplines of architecture and structural engineering. The set addresses all major aspects of structures and architecture, including building envelopes, comprehension of complex forms, computer and experimental methods, concrete and masonry structures, educating architects and structural engineers, emerging technologies, glass structures, innovative architectural and structural design, lightweight and membrane structures, special structures, steel and composite structures, the borderline between architecture and structural engineering, the history of the relationship between architects and structural engineers, the tectonics of architectural solutions, the use of new materials, timber structures and more. The contributions on creative and scientific aspects of the conception and construction of structures on advanced technologies and on complex architectural and structural applications represent a fine blend of scientific, technical and practical novelties in both fields. This set is intended for both researchers and practitioners, including architects, structural and construction engineers, builders and building consultants, constructors, material suppliers and product manufacturers and other experts and professionals involved in the design and realization of architectural, structural and infrastructural projects.
