Norris, 2012-09-17 CRYSTAL Alberta was established to research ways to improve students understanding and reasoning in science and mathematics To accomplish this goal faculty members in Education Science and Engineering as well as school teachers joined forces to produce a resource bank of innovative and tested instructional materials that are transforming teaching in the K 12 classroom Many of the instructional materials cross traditional disciplinary boundaries and explore contemporary topics such as global climate change and the spread of the West Nile virus Combined with an emphasis on the use of visualizations the instructional materials improve students engagement with science and mathematics Participation in the CRYSTAL Alberta project has changed the way I think about the connection between what I do as a researcher and what I do as a teacher I have learned how to better translate scientific knowledge into language and activities appropriate for students thereby transforming my own teaching I also have learned to make better connections between what students are learning and what is happening in their lives and the world thereby increasing students interest in the subject and enriching their learning experience **ENC Focus**, 2001 *Elementary Mathematics Curriculum Materials* Janine T. Remillard, Ok-Kyeong Kim, 2020-03-16 The book presents comparative analyses of five elementary mathematics curriculum programs used in the U S from three different perspectives the mathematical emphasis the pedagogical approaches and how authors communicate with teachers These perspectives comprise a framework for examining what curriculum materials are comprised of what is involved in reading and interpreting them and how curriculum authors can and do support teachers in this process Although the focus of the analysis is 5 programs used at a particular point in time this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general Our analysis of the mathematical emphasis considers how the mathematics content is presented in each program in terms of sequencing the nature of mathematical tasks cognitive demand and ongoing practice and the way representations are used Our analysis of the pedagogical approach examines explicit and implicit messages about how students should interact with mathematics one another the teacher and the textbook around these mathematical ideas as well as the role of the teacher In order to examine how curriculum authors support teachers we analyze how they

communicate with teachers and what they communicate about including the underlying mathematics noticing student thinking and rationale for design elements The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors *Policy-Making as Designing* Arwin van Buuren,Jenny M.
