

Basic Figures in Geometry

Here are some geometric figures that you should recognize as you study geometry.

Line – a straight path goes in two directions without end.

A line can be named in two ways.

- (a) One way is to label the line with one letter and name it. The letter is usually written in *lowercase* letters and *italicized*.

- (b) Another way is to name two points on the line. The letters that represent these points are usually written as **UPPERCASE** letters.

Segment – a part of a line with two endpoints.

A segment is named by labeling the endpoints of the segment with **UPPERCASE** letters.

Skew lines – lines in space that do not intersect and are not parallel. (You must think in terms of space (3-D), not flat (2-D) like a sheet of paper).

Ray – a part of a line that has one endpoint and continues in one direction without end.

A ray is named by labeling the starting point (endpoint) and a point on the ray with **UPPERCASE** letters. A ray is directional so the letter of the endpoint is written first. (Be careful to **NOT** reverse the letters when naming a ray.)

Angle – a figure formed by two rays that share a common endpoint called the vertex.

An angle is named by labeling the vertex and labeling a point on each ray. Sometimes an angle is named just by the vertex letter. (The vertex letter is always the middle letter of the name.)

angle HIJ or angle JIH or angle I

Parallel lines – lines in the same plane that never intersect. (think of the lines lying in a two-dimensional area, like a flat sheet of paper).

Perpendicular lines – lines that intersect (cross each other) forming right angles at the point of intersection.

*Note: The small red right-angle in the figure (looks like an upside down L) denotes perpendicular lines.
