<http://www.sciencecourseware.org/VirtualRiver>

Record your data as you proceed through “Virtual River” on the charts below. If you do not finish the assignment during class, you will have to start at the beginning of the assignment the next time you go to the web site. So having your previous answers will save a considerable amount of time!

### Determining the Average Velocity of a Stream

For each of the four layers use the stop watch to time the movement of particles from one post to the other. The wooden posts are 5.0 meters apart. (Some of the values have been measured and recorded for you.)

Make each measurement twice to the nearest 0.2 seconds. Record your data in the table below. Then record the average of the two times.

Fraction of Depth	Time 1 (sec)	Time 2 (sec)	Average Time (sec)
0.1 D	<input type="text"/>	<input type="text"/>	<input type="text"/>
0.4 D	<input type="text"/>	<input type="text"/>	<input type="text"/>
0.6 D	<input type="text" value="17.2"/>	<input type="text" value="17.2"/>	<input type="text" value="17.2"/>
0.8 D	<input type="text" value="29.8"/>	<input type="text" value="29.6"/>	<input type="text" value="29.7"/>

### Determining the velocity of a stream from top to bottom.

Converting the time for the particles to move 5.0 meters into the velocity of the stream is easy.

Keep in mind that Velocity is Distance per unit Time ( $V = \text{Distance} / \text{Time}$ ). Record your answer to the nearest 0.01 m/sec.

Fraction of Depth	Distance Traveled	Average Time (sec)	Velocity (= Distance / Time)
0.1 D	5.0 meters	11.9 sec	<input type="text" value="0.42"/> m/sec
0.4 D	5.0 m	14.2 sec	<input type="text"/> m/sec
0.6 D	5.0 m	17.2 sec	<input type="text"/> m/sec
0.8 D	5.0 m	29.7 sec	<input type="text" value="0.17"/> m/sec

Laboratory Exercises for Freshwater Ecology John E. Havel, 2016-03-17 Limnology stream ecology and wetland ecology all share an interdisciplinary perspective of inland aquatic habitats Scientists working in these fields explore the roles of geographic position physical and chemical properties and the other biota on the different kinds of plants and animals living in freshwaters How do these creatures interact with each other and with their physical environment In what ways have humans impacted aquatic habitats By what methods do freshwater ecologists study these environments With this new laboratory manual Havel provides a variety of accessible hands on exercises to illuminate key concepts in freshwater ecology These exercises include a mixture of field trips indoor laboratory exercises and experiments with some portions involving qualitative observations and others more quantitative With the help of this manual students will develop an appreciation for careful techniques used in the laboratory and in the field as well as an understanding of how to collect accurate field notes keep a well organized lab notebook and write clear scientific reports

Mark Leckie, Kate Pound, Megan Jones, Lawrence Krissek, 2021-06-25 Reconstructing Earth's Climate History There has never been a more critical time for students to understand the record of Earth's climate history as well as the relevance of that history to understanding Earth's present and likely future climate There also has never been a more critical time for students as well as the public at large to understand how we know as much as what we know in science This book addresses these needs by placing you the student at the center of learning In this book you will actively use inquiry based explorations of authentic scientific data to develop skills that are essential in all disciplines making observations developing and testing hypotheses reaching conclusions based on the available data recognizing and acknowledging uncertainty in scientific data and scientific conclusions and communicating your results to others The context for understanding global climate change today lies in the records of Earth's past as preserved in archives such as sediments and sedimentary rocks on land and on the seafloor as well as glacial ice corals speleothems and tree rings These archives have been studied for decades by geoscientists and paleoclimatologists Much like detectives these researchers work to reconstruct what happened in the past as well as when and how it happened based on the often incomplete and indirect records of those events preserved in these archives This book uses guided inquiry to build your knowledge of foundational concepts needed to interpret such archives Foundational concepts include interpreting the environmental meaning of sediment composition determining ages of geologic materials and events supported by a new section on radiometric dating and understanding the role of CO<sub>2</sub> in Earth's climate system among others Next this book provides the opportunity for you to apply your foundational knowledge to a collection of paleoclimate case studies The case studies consider long term climate trends climate cycles major and or abrupt episodes of global climate change and polar paleoclimates New sections on sea level

Ocean acidification is a global phenomenon with local effects Marine ecosystems are facing multiple stressors leading to significant changes Time series observations are the basis to understand these changes and distinguishing between natural and anthropogenic variability of physical chemical and biological components of marine environments Moreover field monitoring is often neglected as a tool to document the responses of marine organisms and key habitats to ocean acidification Time series observations of ocean acidification are thus critical to understanding the current threats that the ocean s ecosystems are witnessing and efficiently developing and implementing adaptation and mitigation solutions Time series dedicated to observing ocean acidification other stressors as well as biological parameters are the baseline for long term assessment of the ocean s health and for evaluating the efficiency of local and global actions toward achieving climate targets Therefore the goal of this Research Topic is to highlight the latest research efforts conducted to document ocean acidification patterns and trends and their consequences on marine life In this issue we will focus on new and old time series stations efforts to bridge physical chemical and biological observations and their application for modeling and future projections
