Communicating Process Architectures 2004 Ian East,J. Martin,P.H. Welch,2004 Communicating Process Architecture CPA describes an approach to system development that is process oriented It makes no great distinction between hardware and software It has a major root in the theory of Communicating Sequential Processes CSP However the underlying theory is not limited to CSP The importance of mobility of both channel and process within a network sees integration with ideas from the calculus Other formalisms are also exploited such as BSP and MPI The focus is on sound methods for the engineering of significant concurrent systems including those that are distributed across the Internet or within a single chip and or software scheduled on a single execution unit Traditionally at CPA the emphasis has been on theory and practice developing and applying tools based upon CSP and related theories to build high integrity systems of significant size In particular interest focuses on achieving scalability and security against error The development of Java C and C libraries to facilitate secure concurrent programming using mainstream languages has allowed CPA to continue and proliferate This work continues in support of the engineering of distributed applications Recently there has been greater reference to theory and its more direct application to programming systems and languages In this volume the formal CSP is very well presented The papers provide a healthy mixture of the academic and commercial software and hardware application and infrastructure which reflects the nature of the discipline *Single Cell Analysis* J. Paul Robinson,Andrea Cossarizza,2017-04-18 This book highlights the current state of the art in single cell analysis an area that involves many fields of science from clinical hematology functional analysis and drug screening to platelet and microparticle analysis marine biology and fundamental cancer research This book brings together an eclectic group of current applications all of which have a significant impact on our current state of knowledge The authors of these chapters are all pioneering researchers in the field of single cell analysis The book will not only appeal to those readers more focused on clinical applications but also those interested in highly technical aspects of the technologies All of the technologies identified utilize unique applications of photon detection systems **Scientific and Technical Aerospace Reports** ,1987 *Nuclear Science Abstracts* ,1973 **Report summaries** United States.
