DEFINITION AND SCOPE OF ECONOMICS

Definition and Scope of Economics:

Economics

Definition: Economics is that branch of social science which is concerned with the study of how individuals, households, firms, industries and government take decision relating to the allocation of limited resources to productive uses, so as to derive maximum gain or satisfaction. Simply put, it is all about the choices we make concerning the use of scarce resources that have alternative uses, with the aim of satisfying our most pressing infinite wants and distribute it among ourselves.

Nature of Economics

1. **Economics is a science:** Science is an organised branch of knowledge, that analyses cause and effect relationship between economic agents. Further, economics helps in integrating various sciences such as mathematics, statistics, etc. to identify the relationship between price, demand, supply and other economic factors.
 - **Positive Economics:** A positive science is one that studies the relationship between two variables but does not give any value judgment, i.e. it states 'what is'. It deals with **facts about the entire economy**.
 - **Normative Economics:** As a normative science, economics **passes value judgement**, i.e. 'what ought to be'. It is concerned with economic goals and policies to attain these goals.

Economics is an art: Art is a discipline that expresses the way things are to be done, so as to achieve the desired end. Economics has various branches like production, distribution, consumption and economics, that provide general rules and laws that are capable of solving different problems of society.

Therefore, economics is considered as science as well as art, i.e. **science in terms of its methodology and arts as in application**. Hence, economics is concerned with both theoretical and practical aspects of the economic problems which we encounter in our day to day life.
