Renin-Angiotensin-Aldosterone System - Latest Trends Takaaki Senbonmatsu,Makoto Katoh,2025-04-16 Renin

Angiotensin Aldosterone System Latest Trends consists of five chapters related to the renin angiotensin aldosterone system RAAS RAAS is a crucial hormonal system that regulates blood pressure blood volume and sodium salt balance in the body When the kidneys detect abnormalities in hemodynamics such as a drop in blood pressure or sodium concentration renin is secreted leading to the production of angiotensin II which is a physiologically active substance Angiotensin II causes cell proliferation vasoconstriction and sodium reabsorption through the angiotensin II type 1 receptor AT1 receptor helping maintain hemodynamic balance Additionally the AT1 receptor stimulates aldosterone secretion from the adrenal cortex Aldosterone regulates sodium reabsorption and potassium excretion in the kidneys Excessive activity of this system can lead to cardiovascular diseases To address this RAAS inhibitors such as angiotensin converting enzyme inhibitors ACEi angiotensin II type 1 receptor blockers ARB direct renin inhibitors DRI and mineralocorticoid receptor antagonists MRAs also known as aldosterone blockers are used to treat hypertension heart failure and arteriosclerosis These therapies can be considered the 20th century RAAS inhibitors In the 21st century the discovery of the pro renin receptor added a new dimension to the RAAS The physiological activation mechanism following angiotensin II has also been elucidated While research on the pro renin receptor as a RAAS independent factor with organ crossing functions and a potential therapeutic target continues there is still no consensus on its role as part of the RAAS Further research is needed to explore the physiological activation mechanism following angiotensin II This book collects the latest research on RAAS including studies on new indicators related to angiotensin converting enzyme and provides valuable information on its functions

Ecology and Evolution of Infectious Diseases Benjamin Roche,Hélène Broutin,Frédéric Simard,2018-05-11

In recent years the ecology and evolution of infectious diseases has been studied extensively and new approaches to the study of host pathogen interactions continue to emerge At the same time pathogen control in low income countries has tended to remain largely informed by classical epidemiology where the objective is to treat as many people as possible despite recent research suggesting new opportunities for improved disease control in the context of limited economic resources The need to integrate the scientific developments in the ecology and evolution of infectious diseases with public health strategy in low income countries is now more important than ever This novel text uniquely incorporates the latest research in ecology and evolutionary biology into the discussion of public health issues in low income countries It brings together an international team of experts from both universities and health NGOs to provide an up to date authoritative and challenging review of the ecology and evolution of infectious diseases focusing on low income countries for effective public health applications and outcomes It discusses a range of public health threats including malaria TB HIV measles Ebola tuberculosis influenza and meningitis among others
