Estimating the Distribution and Production of Microplankton in a Coastal Upwelling Front from the Cellular

Content of Guanosine-5 Triphosphate and Adenosine-5 Triphosphate Carol Diane Jori, 1981 This thesis examines the distribution and production of micro organisms within a coastal upwelling front located off Pt Sur California Underway measurements of adenosine 5 triphosphate ATP and pigment fluorescence principally chlorophyll a were used to estimate the amount of living biomass present at 2 5 m Specific and absolute productivity were measured by the nucleotide ratio of guanosine 5 triphosphate GTP to ATP and GTP respectively The highest concentration of biomass associated with the highest rate of absolute productivity was preferentially located in the strong thermo nutrient gradient in the warmer stratified water at the equatorward edge of the feature The measurement of specific productivity using the GTP to ATP ratio was significantly correlated with assimilation numbers productivity index lending support to the hypothesis that this ratio is a good indicator of specific community productivity in microplankton principally phytoplankton No correlation existed between the GTP concentration which was enzymatically determined and the concentration of GTP which was inferred from the calculated values of delta ATP This finding indicates that delta ATP is not a good estimator of GTP in community assemblages of microplankton

Synopsis of An Array of Physical Methods available to move DNA into the Nucleus. Dr. Hakim. K. Saboowala, 2020-09-14 Synopsis of An Array of Physical Methods available to move DNA into the Nucleus The ability to introduce isolated DNA into cells has tremendous influence on advances of molecular biology Recently with the development of attractive strategies for gene therapy successful gene delivery has gained importance once again and become a major challenge in this field During the past decades a wide repertoire of gene transfer techniques has evolved The intentional introduction of recombinant DNA molecules into a living organism can be achieved in many ways The array of methods available to move DNA into the nucleus provides the flexibility necessary to transfer genes into cells as physically diverse are

T Cell Protocols Kelly P. Kearse, 2008-02-02 The purpose of T Cell Protocols Development and Activation is to c lect a series of protocols particularly those that have been developed within the past few years to help investigators master new techniques or improve existing ones for the study of T cell Biology Invariably in putting together a book like this it is difficult to decide which methods to include and which to leave out To this end methods were selected from a variety of disciplines including cellular immunology b chemistry and molecular biology to try to provide something of interest for everyone who works on T cell development and activation I would like to mention that my primary reason for agreeing to put this book together is that when I was a graduate student I purchased a copy of Selected Methods in Cellular Immunology by Mishell and Shigii which proved a tremendous help in learning the basics of one and two dimensional gel te niques and other methods The cover has long since fallen off but it still remains one

of my most valued reference books for the laboratory It is my hope that T Cell Protocols Development and Activation will prove similarly useful to current and future scientists wishing to learn new methods for exploring the development and activation of T cells
