Simulation in Aviation Training Florian Jentsch, Michael Curtis, 2017-05-15 Simulations have been a fixture of aviation training for many years. Advances in simulator technology now enable modern flight simulation to mimic very closely the look and feel of real world flight operations. In spite of this, responsible researchers, trainers, and simulation developers should look beyond mere simulator fidelity to produce meaningful training outcomes. Optimal simulation training development can unquestionably benefit from knowledge and understanding of past, present, and future research in this topic area. As a result, this volume of key writings is invaluable as a reference to help guide exploration of critical research in the field. By providing a mix of classic articles that stand the test of time and recent writings that illuminate current issues, this volume informs a broad range of topics relevant to simulation training in aviation.

Visual Memory Timothy F. Brady, Wilma A. Bainbridge, 2022-03-29 Featuring contributions from world-leading researchers, this book explores the relationship between visual perception and memory. It bridges the traditionally separate fields of vision science and recognition memory and deals with an interdisciplinary set of perspectives combining research in psychology, neuroscience, and artificial intelligence. The book makes new connections between the wealth of research from each respective field, developing the idea that visuospatial memory is our best memory system. This volume traverses topics grounded in both empirical study and real-world applications, including working short-term memory, long-term memory, the neuroscience of memory, development of memory over the lifespan, autobiographical memories, false memories, and eyewitness testimony. It argues that an increased knowledge of how visuospatial memory works can lead to an improved understanding of the basic features of memory, as well as providing strategies for memory improvement. The book features cutting-edge visual memory research where converging methods in psychophysics, cognitive neuroscience, and computational modeling have been propelling the field forward. Visual Memory is an essential read for all students and researchers of memory and visual perception. It will also be useful for researchers and students in related fields, including human-computer interaction, data visualization, cognitive science, and cognitive enhancement.

Spatial Visualization and Professional Competence Andrew Paquette,2018-08-30 The computer graphics CG industry is an attractive field for undergraduate students but employers often find that graduates of CG art programmes are not proficient The result is that many positions are left vacant despite large numbers of job applicants This book investigates how student CG artists develop proficiency The subject is important to the rapidly growing number of educators in this sector employers of graduates and students who intend to develop proficiency for the purpose of obtaining employment Educators will see why teaching software oriented knowledge to students does not lead to proficiency but that the development of problem solving and visualisation skills do This book follows a narrow focus as students develop proficiency in a cognitively challenging task known as NURBS modelling This task was chosen due to an observed relationship between students who succeeded in the task and students who successfully obtained employment after graduation In the study this is based on readers will be shown that knowledge based explanations for the development of proficiency do not adequately account for proficiency or expertise in this field where visualisation has been observed to develop suddenly rather than over an extended period of time This is an unusual but not unique observation Other studies have shown rapid development of proficiency and expertise in certain professions such as among telegraph operators composers and chess players Based on these observations the book argues that threshold concepts play a key role in the development of expertise among CG artists
