Becker,Andreas Knez,Maximilian F Reiser,2006-12-15 Preface to the Second Edition Despite worldwide efforts to assess and control cardiovascular risk factors cardiac diseases and in particular coronary artery disease CAD are still the foremost causes of death in the developed countries of Western Europe North America and Asia and are becoming increasingly common in Eastern Europe and the developing world Deanfield 2001 Approximately one in five deaths is currently related to cardiac disease in Europe and the US Nearly 500 000 deaths caused by CAD are reported every year in the US over 600 000 in Europe 170 000 of these in Germany alone Over 12 million US citizens have a history of CAD while every year 1 1 million US and 300 000 German citizens suffer a coronary attack and more than 40% will die as a result of these attacks Every second patient dies without prior symptoms and in most cases myocardial infarction occurs without warning Once a blockage of the coronary arteries has occurred death may ensue within a few minutes even before hospitalization is possible These alarming statistics highlight an acute need for tools to diagnose cardiac and coronary artery disease Presently the gold standard mod ity for diagnosis of CAD is invasive selective coronary angiography More than 2

Radiation Dose from Adult and Pediatric Multidetector Computed Tomography D. Tack,Pierre Alain Gevenois,2007-12-31 Because of the radiation dose delivered multidetector row CT MDCT may induce cancers and the risk of death has been estimated at up to one per 1 000 examinations Despite this only a small proportion of referring clinicians radiologists and technologists are aware of both the radiation risks and their underlying mechanisms This book is designed to rectify this situation The first part of the book provides a comprehensive approach to all the factors that influence the radiation dose and subsequently the risk induced by using MDCT in children and adult patients In the second part guidelines are proposed for optimization of the radiation dose in order to obtain an image quality sufficient for appropriate diagnostic performance while restricting the dose delivered This book written by experts of international standing will appeal to both general and specialized radiologists including pediatric radiologists CT technologists physicists manufacturers and all professionals involved in MDCT   **World Congress on Medical Physics and Biomedical Engineering September 7 - 12, 2009 Munich, Germany** Olaf Dössel,Wolfgang C.
