Three-dimensional Echocardiography Thomas Buck,Andreas Franke,Mark J. Added Value of 3D Imaging in the Diagnosis and Prognostication of Patients with Right Ventricular Dysfunction Attila Kovacs,2024-01-24 Right ventricular RV function has proven to be a prognostic factor in heart failure with reduced and preserved left ventricular ejection fraction or in pulmonary arterial hypertension RV function is also a cornerstone in managing relatively novel clinical issues such as mechanical circulatory support devices or grown up congenital heart diseases Despite the notable amount of circumferentially oriented myofibers in the subepicardial layer of the RV myocardium the non longitudinal motion directions are often neglected in the everyday assessment of RV function The complex RV contraction pattern however incorporates distinct mechanical components 3D imaging may enable capturing subtle RV dysfunction which can be undetectable by conventional methods Novel 3D based parameters may allow an earlier diagnosis and better risk stratification of numerous cardiac and primarily non cardiac diseases

Comprehensive Insights into Mitral Valve Prolapse: From biology to

future perspectives of treatment, passing through diagnostic tools, surgical techniques and transcatheter options

Christophe Tribouilloy, Marco Zanobini, Claudia Maria Loardi, 2023-09-11 Mitral valve prolapse MVP consisting of an abnormal protrusion of mitral leaflets into the left atrium is the main cause of severe mitral regurgitation and it often requires surgical or interventional correction. It mainly represents a typical adult disease with an average prevalence in industrialized countries ranging from 2 to 8% but even the pediatric population may be affected showing specific features concerning both anatomy and treatment. Although its existence and clinical characteristics are known for several decades, every aspect of this pathological condition is in continuous evolution, being the subject of biologists, cardiologists, and surgeons' active research. The aim of the present Research Topic is to address the MVP entity in its completeness, trying to describe all actual knowledge concerning molecular mechanisms, different clinical presentations, fibroelastic degeneration in elderly people or Barlow disease in young patients, diagnostic findings and tools mainly represented by echocardiography and Nuclear Magnetic Resonance, their specific application to newly developed transcatheter and minimally invasive treatments, indications, surgical management, and interventional strategies. For all these big chapters, special attention will be addressed to show temporal knowledge evolution and new elements acquisition, since the central message is that MVP is in flux and far from full comprehension.
