Although the treatments of the early or loco regionally advanced disease are similar across the different entities, these malignancies have variable biological characteristics and clinical behaviors. These specificities, especially the pathologic type and when available the molecular profile, are taken into account while choosing the treatment for the recurrent metastatic phase. In this context, only few druggable molecular targets have been tested so far and not all are available in clinical practice. However, due to the rarity of SGCs, clinical trials are challenging to conduct and most of the available evidence comes from retrospective studies. **3D Printing for the Radiologist, E-Book** Nicole Wake, 2021-05-27 Comprehensive yet concise 3D Printing for the Radiologist presents an overview of three dimensional printing at the point of care.
