**Lunar and Planetary Webcam User's Guide** Martin Mobberley, 2006-08-03 In the last few years cheap webcams have revolutionized amateur astronomy by providing a very inexpensive alternative to purpose made astronomical CCD cameras which use refrigerated imaging chips and are thus extremely expensive Webcams are capable of more advanced work than normal digital cameras because their simple construction makes it easy to remove the webcam's lens allowing it to be interfaced directly to a telescope Using a webcam is not difficult but most amateur astronomers who have tried to do this do not achieve the finest results despite the webcam's potential There are numerous imaging and image processing tricks and techniques and all of them are needed to get the best results Along with webcam technology has come simple to use image processing and enhancement using a PC the most powerful technique is stacking in which the best images out of hundreds are selected and summed automatically to provide startlingly good results *Lunar and Planetary Webcam User's Guide* demystifies the jargon of webcams and computer processing and provides detailed hints and tips for imaging the Sun Moon and planets with a webcam He looks at each observing target separately describing and explaining all specialised techniques in context Glance through the images in this book to see just how much you can easily achieve by using a webcam with your telescope

*A User's Guide to the Meade LXD55 and LXD75 Telescopes* Martin Peston, 2010-04-28 I have owned telescopes for over 25 years since I was a young lad I purchased an LXD55 AR 6 Refractor in 2002 and was one of the first to own one in the UK I am also a proud owner of an LXD75 SC 8 Armed with these two very different telescopes I have spent many hours searching the skies for interesting objects using Meade's Autostar Goto facility My motivation to write a book about the LXD Goto telescope series first came from comments about an LXD55 AR 6 Refractor review that was published on the LXD55.com website From then on I have had regular emails from people asking technical questions about the telescope and which model is best suited for them Whilst attending Star parties in the UK I found that many LXD owners would struggle to use them even at a basic level especially if they have never owned or used an equatorially mounted Goto telescope before Since the first LXD55 models came out in early 2002 owners have struggled to find useful information to help them use the telescopes to the best advantage There have been mixed reactions about its quality and performance Hence this book is directed towards those who are new to Goto and the LXD telescope

Macdonald, 2012-07-06 How to Observe the Sun Safely 2nd Edition gives all the basic information and advice the amateur astronomer needs to get started in observing our own ever fascinating star Unlike many other astronomical objects you do not need a large telescope or expensive equipment to observe the Sun And it is possible to take excellent pictures of the Sun with today s low cost digital cameras This title concentrates on providing practical on the spot advice to the amateur astronomer who is interested in observing the Sun using commercially available equipment This book surveys what is visible on the Sun before describing how to record solar features and measure solar activity levels There is also an account of how to use H alpha and Calcium K filters to observe and record prominences and other features of the solar chromosphere the Sun s inner atmosphere Because we are just entering a period of high activity on the Sun following a long quiet period many more amateur astronomers will become interested in observing it The second edition includes an update of Chapter 2 to reflect advances in solar observing equipment since 2002 and a section on building a solar projection box originally included in the main body of this chapter has been moved to Appendix A Also Chapter 6 thru 8 have been completely revised to give amateur astronomers advice on how to use film to photograph the Sun and how to use digital cameras This new edition also

includes more than twice as many illustrations as the first and almost half of them new images     The Astrophotography Manual Chris Woodhouse, 2015-05 The Astrophotography Manual is for those photographers who aspire to move beyond using standard SLR cameras and editing software and who are ready to create beautiful images of nebulae, galaxies, clusters and the solar system. Beginning with a brief astronomy primer, this book takes readers through the full astrophotography process from choosing and using equipment through image capture, calibration and processing. This combination of technical background information and the hands-on approach brings the science down to earth with a practical method to plan for success. Features include Over 400 images, graphs and tables to illustrate these concepts. A wide range of hardware to be used including smartphones, tablets and the latest mount technologies. How to utilize a variety of leading software such as Maxim DL, Nebulosity, Sequence Generator Pro, Photoshop and PixInsight. Case studies showing how and when to use certain tools and overcoming technical challenges. How sensor performance and light pollution relate to image quality and exposure planning     *The Hatfield SCT Lunar Atlas* Anthony Cook, 2013-10-11 In 2004 it became obvious that Henry Hatfield's original atlas wasn't suitable for all current commercially made amateur telescopes. Newtonian telescopes and astronomical refractors for many years the only choice for amateurs invert the observed image. The standard Hatfield Atlas therefore follows the IAU International Astronomical Union convention of having maps and photographs with South at the top and West on the left, an inverted image. However, the current ranges of Schmidt-Cassegrain and Maksutov telescopes that's most of those manufactured by Meade, Celestron and many others don't invert the observed image but instead reverse it left for right. That's with North at the top and East on the left. Because of the way the human visual system works, it is almost impossible to mentally mirror image a map to compare it with the view through the eyepiece, so even turning an IAU standard atlas upside down doesn't help. This new SCT version of the Atlas solves this problem for observers. Identification of lunar features is made quick and easy. The new digitally re-mastered second edition vastly improves the clarity and definition of the original photographs significantly beyond the resolution limits of the photographic grains present in earlier atlas versions whilst preserving the layout and style of the original publications. This has been achieved by merging computer visualized Earth-based views of the lunar surface derived from NASA's Lunar Reconnaissance Orbiter data with scanned copies of Commander Hatfield's photographic plates using the author's own software. The result is a The Hatfield SCT Lunar Atlas for 21st century amateur telescopes up to and beyond 12 inch aperture. It contains all the features that made the original so widely used: a combination of an index of all International Astronomical Union named primary lunar features and twelve chart areas help to locate any named lunar features of interest that can each be examined under typically five different states of illumination. Close-ups of interesting features are also included. The new Atlas is supplemented by an introduction to its use, a short description of the digital re-mastering technique and a completely new section describing lunar observing techniques. At the end of the atlas there is an index of all named features and crater diameters along with a summary table of the dates

and times that the original Hatfield images represent      Astronomy Now ,2007      Moon Observer's Guide Peter Grego,2004 A night by night guide to studying the moon The moon is usually the first celestial body that captures a stargazer's attention and imagination Throughout history the moon has endured as a universal subject of myth poems entertainment and intense scientific endeavor In clear language and with full color photographs and illustrations throughout Moon Observer's Guide offers practical guidance to amateur astronomers viewing Earth's only natural satellite There is valuable advice for observing the Moon with the naked eye binoculars and telescopes Central to this book is a detailed 28 day guide to lunar features Lunar geology and the various causes of physical features such as craters and volcanoes are described Also included are Guidelines for choosing binoculars and telescopes Ways of recording observations Digital and conventional photography Using Internet resources personal computers and lunar software programs Safety tips for observing the moon during solar and lunar eclipses Detailed moon maps This book is an ideal reference for the growing numbers of beginning astronomers      *Digital Astrophotography* Stefan Seip,2012-04-19 At first glance the challenge of astrophotography may appear daunting But not only are spectacular results possible they are easy to learn with the step by step instructions provided in Stephan Seip's Digital Astrophotography A Guide to Capturing the Cosmos Today amateurs can produce images that only twenty years ago a large professional observatory would have been proud of and this book shows you how Learn how to Set up your camera for optimum results Focus your camera for razor sharp images Take beautiful night shots with a simple compact digital camera a tripod and a telescope Use a DSLR camera to shoot the Sun Moon stars star clusters and nebulae through your telescope Get brilliant images of planets with a Webcam Capture remote galaxies with a charge coupled device CCD camera just like a pro Also included are lessons on the processing that is done in the studio after your shoot including how to Shoot RAW format images and improve them with calibration frames Take short exposures of faint deep sky objects and combine them into a longer exposure Perform brightness contrast and color correction Make corrections to correct for vignetting and uneven field illumination Process your images for stunning results Equipment requirements for astrophotography range from nothing but a simple camera and tripod to a multi thousand dollar computer controlled telescope equipped with a CCD auto guider and separate guide scope Researching the best equipment for your needs is a task in itself Seip helps you to sort out which cameras are best for the various celestial objects what to look for when buying a camera and what accessories you really need The rewards of this fascinating hobby as the author says Grants you unforgettable hours under the night sky it allows you to produce aesthetically rewarding and lasting results Astrophotography is a love match between physics photography art and digital image processing It is exciting      *Viewing and Imaging the Solar System* Jane Clark,2014-09-24 Viewing and Imaging the Solar System A Guide for Amateur Astronomers is for those who want to develop their ability to observe and image Solar System objects including the planets and moons the Sun and comets and asteroids They might be beginners or they may have already owned and used an
