Reynolds, 2018-06-21 Does science aim at providing an account of the world that is literally true or objectively true Understanding the difference requires paying close attention to metaphor and its role in science In *The Third Lens* Andrew S Reynolds argues that metaphors like microscopes and other instruments are a vital tool in the construction of scientific knowledge and explanations of how the world works More than just rhetorical devices for conveying difficult ideas metaphors provide the conceptual means with which scientists interpret and intervene in the world Reynolds here investigates the role of metaphors in the creation of scientific concepts theories and explanations using cell theory as his primary case study He explores the history of key metaphors that have informed the field and the experimental philosophical and social circumstances under which they have emerged risen in popularity and in some cases faded from view How we think of cells as chambers organisms or even machines makes a difference to scientific practice Consequently an accurate picture of how scientific knowledge is made requires us to understand how the metaphors scientists use and the social values that often surreptitiously accompany them influence our understanding of the world and ultimately of ourselves The influence of metaphor isn't limited to how we think about cells or proteins in some cases they can even lead to real material change in the very nature of the thing in question as scientists use technology to alter the reality to fit the metaphor Drawing out the implications of science's reliance upon metaphor *The Third Lens* will be of interest to anyone working in the areas of history

cosmos and nature Thus African religion and communities each with its own attendant values do not operate by critical engagement with larger issues of society and civilization especially those shaped by the advent of post modernity Rather they operate via adaptation The communal drive for natural and social harmony inevitably produces a preservationist view of culture leaving things as they are This study takes an integrative approach to religion society and civilization eschews dichotomies and broadly defines and re signifies life and wholeness as a true end of Africans quest today Science Between Truth and Ethical Responsibility Mario Alai,Marco Buzzoni,Gino Tarozzi,2015-04-30 This book offers the most complete and up to date overview of the philosophical work of Evandro Agazzi presently the most important Italian philosopher of science and one of the most influential in the world Scholars from seven countries explore his contributions in areas ranging from philosophy of physics and general philosophy of science to bioethics philosophy of mathematics and logic epistemology of the social sciences and history of science philosophy of language and artificial intelligence education and anthropology metaphysics and philosophy of religion Agazzi developed a complete and coherent philosophical system anticipating some of the turns in the philosophy of science after the crisis of logical empiricism and exerting an equal influence on continental hermeneutic philosophy His work is characterized by an original synthesis of contemporary analytic philosophy phenomenology and classical philosophy including the scholastic tradition and these threads are reflected in the different backgrounds of the contributors to this book While upholding the epistemological value of science against scepticism and relativism Agazzi eschews scientism by stressing the equal importance of non scientific forms of thought such as metaphysics and religion While defending the freedom of research as a cognitive enterprise he argues that as a human and social practice it must nonetheless respect ethical constraints Subject Guide to Books in Print ,2001 The Biographical Treasury.
