1943 in endorsing ever tougher screening and little else. Soon families complained of fathers and teens being drafted instead of being identified as psychiatric 4Fs and Blacks and Native Americans among others complained of bias. A frustrated General George S. Patton famously slapped two malingering neuropsychiatric patients in Sicily, a sentiment shared by Marshall and Eisenhower though they favored a tamer style. Yet psychiatric rejections, evacuations and discharges mounted. While psychiatrist Roy Grinker and a few others treated soldiers close to the front in Tunisia in early 1943, this was the exception. But as demand for manpower soared and psychiatrists finally went to the field and saw that combat itself, not predisposition, precipitated breakdown, leading military psychiatrists switched their emphasis from screening to prevention and treatment. But this switch was too little, too late and slowed by a year-long series of Inspector General investigations even while numbers of psychiatric casualties soared. Ironically, despite and even partly because of psychiatrists' wartime performance plus the emotional toll of war, postwar America soon witnessed a dramatic growth in numbers, popularity and influence of the profession, culminating in the National Mental Health Act 1946. But veterans with PTSD not recognized until 1980 were largely neglected.
