Smart External Stimulus-Responsive Nanocarriers for Drug and Gene Delivery Mahdi Karimi, Parham Sahandi Zangabad, Amir Ghasemi, Michael R Hamblin, 2015-12-01 The concept of smart drug delivery vehicles involves designing and preparing a nanostructure or microstructure that can be loaded with a cargo this can be a therapeutic drug a contrast agent for imaging or a nucleic acid for gene therapy The nanocarrier serves to protect the cargo

from degradation by enzymes in the body to enhance the solubility of insoluble drugs to extend the circulation half life and to enhance its penetration and accumulation at the target site. Importantly smart nanocarriers can be designed to be responsive to a specific stimulus so that the cargo is only released or activated when desired. In this volume we cover smart nanocarriers that respond to externally applied stimuli that usually involve application of physical energy. This physical energy can be applied from outside the body and can either cause cargo release or can activate the nanostructure to be cytotoxic or both. The stimuli covered include light of various wavelengths ultraviolet visible or infrared temperature increased or decreased magnetic fields used to externally manipulate nanostructures and to activate them ultrasound and electrical and mechanical forces. Finally we discuss the issue of nanotoxicology and the future scope of the field.

Dressed Photons Motoichi Ohtsu, 2013-11-25. Authored by the developer of dressed photon science and technology as well as nanophotonics, this book outlines concepts of the subject using a novel theoretical framework that differs from conventional wave optics. It provides a quantum theoretical description of optical near fields and related problems that puts matter excitation such as electronic and vibrational ones on an equal footing with photons. By this description optical near fields are interpreted as quasi particles and named dressed photons which carry the material excitation energy in a nanometric space. The author then explores novel nanophotonic devices fabrications and energy conversion based on the theoretical picture of dressed photons. Further this book looks at how the assembly of nanophotonic devices produces information and communication systems. Dressed photon science and technology is on its way to revolutionizing various applications in devices fabrications and systems. Promoting further exploration in the field, this book presents physically intuitive concepts, theories and technical details for students, engineers and scientists engaged in research and development in dressed photon science and technology as well as nanophotonics.
