6. Photosynthesis has two parts: 1. The Light Reaction, 2. The Dark Reaction or the Calvin Cycle
 - a. **Part 1. The light reaction:** is called the light reaction because it has to use light in order to work.
 - i. 4 major things happen in the Light Reaction.
 1. Chlorophyll captures light energy
 2. Water is split. The H is used to make NADPH and oxygen- O_2 is made
 3. ATP and NADPH are made (these are needed for the dark reaction.)
 - These are energy carrying molecules
 - $\text{ATP} \rightarrow \text{ADP} + \text{P} + \text{Energy}$
 - $\text{NADPH} \rightarrow \text{NADP} + \text{H} + \text{Energy}$
 4. Oxygen is released into the air (Thank You Plants)
 - b. **Part 2: The Dark Reaction** is called the dark reaction because it can work without light. It is also called the **Calvin Cycle** because Melvin Calvin figured out how it works.
 - i. It uses the **ATP** and **NADPH** from the light reaction and **carbon dioxide** in air CO_2 from the air to make **Glucose** $\text{C}_6\text{H}_{12}\text{O}_6$.
See page 205 in your book.
 - ii. remember most of the mass from a plant comes from the air, CO_2

Biology 110 General Biology Study Guide Douglas G. Fratianni, 1984 **Argument-driven Inquiry in Biology** Victor Sampson, 2014-04-01 Are you interested in

using argument driven inquiry for high school lab instruction but just aren't sure how to do it. You aren't alone. This book will provide you with both the information and instructional materials you need to start using this method right away. **Argument Driven Inquiry in Biology** is a one-stop source of expertise, advice, and investigations. The book is broken into two basic parts: 1. An introduction to the stages of argument driven inquiry from question identification, data analysis, and argument development and evaluation to double-blind peer review and report revision. 2. A well-organized series of 27 field-tested labs that cover molecules and organisms, ecosystems, heredity, and biological evolution. The investigations are designed to be more authentic scientific experiences than traditional laboratory activities. They give your students an opportunity to design their own methods, develop models, collect and analyze data, generate arguments, and critique claims and evidence. Because the authors are veteran teachers, they designed **Argument Driven Inquiry in Biology** to be easy to use and aligned with today's standards. The labs include reproducible student pages and teacher notes. The investigations will help your students learn the core ideas, crosscutting concepts, and scientific practices found in the Next Generation Science Standards. In addition, they offer ways for students to develop the disciplinary skills outlined in the Common Core State Standards. Many of today's teachers like you want to find new ways to engage students in scientific practices and help students learn more from lab activities. **Argument Driven Inquiry in Biology** does all of this even as it gives students the chance to practice reading, writing, speaking, and using math in the context of science.

Learning and Awareness Ference Marton, Shirley A. Booth,1997 This book stems from more than 25 years of systematic research into the experience of learning undertaken by a research team trying to account for the obvious differences between more or less successful instances of learning in educational institutions The book offers an answer in terms of the discovery of critical differences in the structure of the learner s awareness and critical differences in the meaning of the learner s world The authors offer a detailed account of the empirical findings that give rise to theoretical insights and discuss the particular form of qualitative research that has been employed and developed The form of learning that is the object of study is considered to be the most fundamental form namely a change in the learner s way of seeing experiencing handling and understanding aspects of the world The need for rigorous analysis of learning of specific subject matter the individual construction of knowledge and its social and cultural embeddedness the defining features of rival approaches into research on learning are reconciled from the approach adopted here into an intertwined and whole experience of learning The learner s experience is always one of learning something in some way and in some context by holding the learner s experience of learning as the focus of study throughout and not studying the learning of the content and the acts and the context as separate and distinct focuses the content the act and the context remain united as constituents of the learner s experience By empirically revealing critical differences in the ways of experiencing these aspects of learning and by developing a theoretical framework for the dynamics through which change comes about in the learner s awareness this book gradually leads the reader to a powerful new view of learning Equipped with the analytical tools and conceptual apparatus to be found in this book the reader will be empowered to learn and to assist others to learn by creating environments conducive to the most fundamental form of learning experiencing aspects of the world in new ways
