The Reactor Handbook: Engineering, 1955 **Rules of Thumb in Engineering Practice** Donald R. Woods, 2007-04-09 An immense treasure trove containing hundreds of equipment symptoms arranged so as to allow swift identification and elimination of the causes These rules of thumb are the result of preserving and structuring the immense knowledge of experienced engineers collected and compiled by the author an experienced engineer himself into an invaluable book that helps younger engineers find their way from symptoms to causes This sourcebook is unrivalled in its depth and breadth of coverage listing five important aspects for each piece of equipment area of application sizing guidelines capital cost including difficult to find installation factors principles of good practice and good approaches to troubleshooting Extensive cross referencing takes into account that some items of equipment are used for many different purposes and covers not only the most familiar types but special care has been taken to also include less common ones Consistent terminology and SI units are used throughout the book while a detailed index quickly and reliably directs readers thus aiding engineers in their everyday work at chemical plants from keywords to solutions in a matter of minutes Characteristics of Chinese Petroleum Geology Chengzao Jia, 2013-11-07 Characteristics of Chinese Petroleum Geology Geological Features and Exploration Cases of Stratigraphic Foreland and Deep Formation Traps systematically presents the progress made in petroleum geology in China and highlights the latest advances and achievements in oil gas exploration and research especially in stratigraphic foreland and deep formation traps The book is intended for researchers practitioners and students working in petroleum geology and is also an authoritative reference work for foreign petroleum exploration experts who want to learn more about this field in China As President of the Chinese Petroleum Society former Vice President of PetroChina Company Limited and Academician of the Chinese Academy of Sciences Dr Chengzao Jia has been engaged in geological research for 30 years and in oil gas exploration for more than 20 years *The Method of Characteristics for Three-dimensional Real-gas Flows* Charles R. Strom, 1967 The method of characteristics is formulated for the computation of the supersonic flow of an inviscid reacting gas over a smooth three dimensional body Various methods of constructing networks of bicharacteristic lines are examined from the point of view of numerical stability and accuracy A new method of

forming the network which consists of projecting forward along streamlines from data points on specified data planes is found to be most easily adopted to the particular requirements of nonequilibrium chemistry The general method was coded for the IBM 7090 computer and the program demonstrated for the case of an ideal gas Calculations were made for the case of an ideal gas Calculations were made for the flow about a spherical tip 15 degree half angle cone at 10 degree angle of attack and a generalized elliptical body at zero incidence Since the program yields the pressure distribution along specified streamlines it is straightforward in principle to link it to a finite rate chemistry stream tube program to treat three dimensional nonequilibrium flows Author Properties of Gases, Liquids, and Solutions Warren P. Physical Acoustics Principles and Methods Volume II Part A Properties of Gases Liquids and Solutions ponders on high frequency sound waves in gases liquids and solids that have been proven as effective tools in examining the molecular domain wall and other types of motions The selection first offers information on the transmission of sound waves in gases at very low pressures and the phenomenological theory of the relaxation phenomena in gases Topics include free molecule propagation phenomenological thermodynamics of irreversible processes and simultaneous multiple relaxation processes The book then takes a look at relaxation processes in gases as well as excitation relaxation molecular theory of relaxation times and relaxation of a dissociation equilibrium The manuscript surveys thermal structural and shear relaxation in liquids Discussions focus on the basic theory for a single chemical reaction structural viscosity and cooperative effects on mechanical and dielectric processes The book also underscores the propagation of ultrasonic waves in electrolytic solutions including ultrasonic velocity and relaxation processes in electrolytic solutions The selection is highly recommended for readers interested in physical acoustics **Carbonizing Properties and Constitution of No. 2 Gas Bed Coal from Point Lick No. 4 Mine, Kanawha County, W.
