Van Der Geest, Yucheng Chen, Peng Hu, Ming Yen Ng, 2024-08-28 In the past decades advanced quantitative indexes obtained by cardiovascular magnetic resonance imaging CMRI such as myocardial strain myocardial T1 ECV T2 T2 relaxation value myocardial blood flow quantification index and hemodynamics indexes have been proposed as an alternative for non invasive quantitative evaluation in various cardiovascular diseases Those quantitative indexes have been proven to be more sensitive in assessing the early change of

myocardial tissue ventricular function or hemodynamics compared to the conventional qualitative methods However there are many challenges in the accurate measurement of those indexes as well as the evaluation of their clinical significance in the diagnosis and prognosis of a certain disease Besides quality control and standardization of those indexes become crucial when promoting them into clinical practice This Research Topic will offer comprehensive reviews and original research articles of the newly emerged quantitative CMRI methods and the clinical insights of the diagnostic and prognostic value of those advanced CMRI indexes CMRI techniques such as myocardial strain analysis quantitative myocardial tissue mapping 2 dimensional 4 dimensional flow quantification and quantitative perfusion will be of our interest The aim of this Research Topic will be to highlight the promising technical improvements in the accurate measurement of the CMRI indexes and or the added value of those indexes in disease diagnosis and prognosis Meanwhile quality control and standardization of the advanced CMRI indexes in multi centre multi vendor research projects will be discussed Statistical Atlases and Computational Models of the Heart.
