Communicating Process Architectures 2000 World Occam and Transputer User Group. Technical Meeting,2000 Modern computing systems are built in terms of components and those components communicating Communication systems imply concurrency which is a theme of the WoTUG series Traditionally concurrency has been taught considered and experienced as an advanced and difficult topic The thesis underlying this conference is that that idea is wrong The natural world operates through continuous interaction of massive numbers of autonomous agents at all levels sub atomic human astronomic It seems it is time to mature concurrency into a core engineering discipline that can be used on an everyday basis to simplify problem solutions as well as to enable them The goal of *Communicating Process Architectures 2000* was to stimulate discussion and ideas as to the role concurrency should play in future generations of scalable computer infrastructure and applications where scaling means the ability to ramp up functionality stay in control as complexity increases as well as physical metrics such as performance

The Read-Out Controller ASIC for the ATLAS Experiment at LHC Stefan Popa,2022-12-17 This thesis presents the complete chain from specifications to real life deployment of the Read Out Controller ROC ASIC for the ATLAS Experiment at LHC including the design of the FPGA based setup used for prototype validation and mass testing of the approximately 6000 chips Long lasting experiments like the ATLAS at the LHC undergo regular upgrades to improve

their performance over time One of such upgrades of the ATLAS was the replacement of a fraction of muon detectors in the forward rapidities to provide much improved reconstruction precision and discrimination from background protons This new instrumentation New Small Wheel is equipped with custom designed radiation hard on detector electronics with the Read Out Controller chip being a mission critical element The chip acts as a clock and control signals distributor and a concentrator buffer filter and real time processor of detector data packets The described and deployed FPGA based test setup emulates the asynchronous chip context and employs optimizations and automatic clock and data synchronization The chip's tolerance to nuclear radiation was evaluated by recording its operation while controlled ultrafast neutron beams were incident to its silicon die Predictions for the operating environment are made A proposed implementation of an FPGA Integrated Logic Analyzer that mitigates the observed limitations and constraints of the existing ones is included *Catalog of Copyright Entries.
