N-Acetylaspartate John Moffett, Suzannah B. Tieman, Daniel R. Weinberger, Joseph T. Coyle, Aryan M. A. Namboodiri, 2006-10-21 N acetylaspartate or NAA is the acetylated form of the amino acid aspartate and it is present exclusively in the nervous system Indeed NAA is one of the most highly concentrated chemicals found in the brain of humans and animals and yet the functions served by this brain specific metabolite remain elusive and controversial Despite the uncertainties surrounding the functions of NAA in the development and operation of the nervous system this molecule has attracted the attention of researchers and clinicians for two distinct reasons First the acetyl proton on NAA gives off a very prominent signal in water suppressed proton magnetic resonance spectroscopy MRS which permits clinicians to monitor levels of NAA in the brains of patients in a non invasive manner Because NAA is found

primarily in neurons and because the levels in the brain have been found to change rapidly after injury or slowly during neurodegenerative diseases MRS has become a preferred method of analyzing nerve cell dysfunction and death without surgical intervention The second reason that NAA has attracted attention in recent years is that a congenital genetic disorder of NAA metabolism has been found to be the cause of the neurodegenerative disorder known as Canavan's disease Canavan's disease is an inherited leukodystrophy that involves myelination pathologies of cortical white matter leading to death within 10 years of birth The genetic mutation results in a defective enzyme that deacetylates NAA in the brain resulting in a significant rise in NAA levels in the brain and urine This enzyme known as aspartoacylase ASPA appears to be involved in the process of myelination such that a defective enzyme results in a disruption of the myelination of nerve fibers during development The purpose of this symposium is to bring together investigators from around the world who are interested in the study of NAA and the roles it plays in neuronal development and functioning It is hoped that bringing researchers and clinicians together in such a forum will facilitate rapid progress in this emerging field and will help lead to discoveries that can alleviate the suffering caused by a deadly inheritable infantile disease

Ocular Motor and Vestibular Function in Neurometabolic, Neurogenetic, and Neurodegenerative Disorders Aasef G. Shaikh, Alessandra Rufa, 2018-08-29 Eye movements provide rich source of information about brain functioning for neurologists and neuroscientists They provide diagnostic clues define and localize motor and cognitive disorders Objective eye movement assessments associated with clinical observation and genetic testing in neurodegenerative neurometabolic and neurogenetic diseases provide insight into their pathophysiology and disease mechanism Finally the eye movements may be used for testing and following the response to therapies The concrete value of studying eye movement stems from a number of advantages compared to the study of movements of axial or limb muscles The eye movements are accessible to clinical inspection they can be measured precisely their interpretation is clear and therefore ocular motility examination has high localization value There are several standardized tasks to study of each subclass of eye movements that are recognized for motor or cognitive behavior Indeed the studies of eye movement had allowed test of motor and cognitive functions of the brain in a vast range of neurological disease Both cortical and subcortical dysfunctions may be detected with the analysis of subclasses of eye movements and interpreted in association with other clinical laboratory and neuroimaging features The goal of this topic focused volume of Frontiers in Neurology is to gather seminal studies from well known scientists and laboratories from across the world delineating the features of eye movements and vestibular system in neurogenetic neurometabolic and neurodegenerative disorders Such collection of articles to our knowledge is unique and never done in the past The topics and the compilation will be of interest to broad groups of neuroscientists and neurologists for the reasons as follows 1 Neurodegenerative diseases represent a large portion of neurological diseases encountered in neurological clinical practice Eye movement changes may occur early in their course and may be specific thus orienting the diagnosis 2 Neurometabolic and neurogenetic conditions although rare show specific and characteristic eye movements that represent the hallmark of the disease Such disorders often represent a pathologic model that helps to understand the normal functioning of specific brain regions and networks

Roa Romero, 2013-10-01 The general theme of MEDICON 2013 is Research and Development of Technology for Sustainable Healthcare This decade is being characterized by the appearance and use of emergent technologies under development This situation has produced a tremendous impact on Medicine and Biology from which it is expected an unparalleled evolution in these disciplines towards novel concept and practices The consequence will be a significant improvement in health care and well fare i e the shift from a reactive medicine to a preventive medicine This shift implies that the citizen will play an important role in the healthcare delivery process what requires a comprehensive and personalized assistance In this context society will meet emerging media incorporated to all objects capable of providing a seamless adaptive anticipatory unobtrusive and pervasive assistance The challenge will be to remove current barriers related to the lack of knowledge required to produce new opportunities for all the society while new paradigms are created for this inclusive society to be socially and economically sustainable and respectful with the environment In this way these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications *Medical Image Computing and Computer-Assisted Intervention -- MICCAI 2010* Tianzi Jiang, Nassir Navab, Josien P.W. of which 45 were selected for podium presentation and 206 for poster presentation The acceptance percentage 32% was in keeping with that of previous MICCAI conferences All 251 papers are included in the three MICCAI 2010 LNCS volumes
