PHOENIX LENS USER GUIDE

Version 1.2

The Phoenix lens represent the latest generation in patented anamorphic optical solutions to engage the anamorphic modes currently available in all popular home theater projectors for dramatically increasing the clarity, detail and brightness of UltraWide movies and even for filling UltraWide screens with non-UltraWide content with the highest performance.

GENERAL GUIDELINES AND SPECIFICATIONS

Projector location. The Phoenix Lens is specifically designed to be used upright (supported by its Lens Bracket) with a projector vertically positioned at or below the center of the projection screen, OR, used inverted (hanging from its Lens Bracket) with a projector vertically positioned at or above the center of the screen. The projector should be horizontally positioned at the center of the screen with very little or no horizontal keystone adjustment.

Projector distance to screen. The projector should be located within the specified throw distance range of the Phoenix Lens (14'–19' or 4.3m–5.8m). Distances outside this range will gradually become more difficult to focus.

Maximum screen size. The vertical dimension of your screen should ideally be less than the projector throw distance divided by 3.5. Screens larger than this will cause increasingly greater distortion and possibly color fringing beyond the capability of ECC projectors. Generally, a higher ratio of projector distance to screen size provides better results. A ratio of less than 3.0 may still be acceptable but is not recommended.
