

AP Physics C – Work, energy and power

Work – Work is done to an object if the force moving the object causes a change in forms of energy associated with the object. In short, work is a change in energy.

$W = \int \vec{F} \cdot d\vec{x}$. Work is always the integral of the force function with respect to displacement in the direction of the force, but if the force is constant, we can use $W = Fd \cos \theta$. Where d is the distance moved and θ is the angle between the force vector and the distance direction.

$W_{\text{total}} = \Delta K$. The total work done by all forces acting on an object equal the change in kinetic energy of the object.

$W_{\text{cons}} = -\Delta U$. Work by conservative forces only, equal the opposite of the change in potential energy by that force. Conservative forces give energy and take energy equally as direction is changed. (ie gravity and springs)

Energy – the ability to do work either immediately or later.

Types of energy – two main forms of mechanical energy are potential energy and kinetic energy. (other forms not covered here include thermal, nuclear, chemical, sound, light, electric and magnetic)

Conservation of energy – $E_i = E_f$. The energy at one point in time for a given system is equal to the energy at another point in time although it is allowed to change form.

Potential energy. There are two forms of mechanical energy we will study, gravitational potential energy and spring (or elastic) potential energy. Both use the variable U .

Gravitational potential energy

$U_g = mgh$. on Earth, but for any two masses anywhere in space we use $U_g = -G \frac{m_1 m_2}{r}$.

The negative sign is assigned because the scientific community decided that when you are furthest away (infinitely far) that would be called 0 Joules of energy. So, everything below that point would be less energy and therefore negative.

The idea behind U_g is that the higher an object is above the ground, the more it can pick up speed (kinetic energy) as it falls, therefore it must have more stored energy the higher it is.

Remember, $W = -\Delta U$ so the work done by the force of gravity creates potential energy opposite to the work done. If the force of gravity does work on a rock (gives it more kinetic energy as it falls) then the change in potential energy is negative (it is losing potential energy).
