

1. Answer the questions below on the basis of your experience with charges and magnets.

a. Based on your experience with *electric field lines*:

- how should the *direction* of the magnetic field at every point be related to the *magnetic field lines*?
- how should the *strength* of the magnetic field at every point be reflected in the *magnetic field lines*?

b. Carefully draw the *magnetic field lines* for the bar magnet shown below. Be sure to draw the field lines so that they include information about the *strength* and *direction* of the field both inside and outside the magnet.

c. Based on the magnetic field lines you have drawn, rank the magnitude of the magnetic field at points A–E.

2. Two identical magnets are placed as shown. Using different colored pens sketch the approximate magnetic field vectors at the four labeled points for:

- just the horizontal top magnet,
- just the vertical bottom magnet, and
- when both are present.

Explain how you determined the field vectors for the case when both magnets are present.

**Made to Measure** Philip Ball,2021-09-14 Made to Measure introduces a general audience to one of today s most exciting areas of scientific research materials science Philip Ball describes how scientists are currently inventing thousands of new materials ranging from synthetic skin blood and bone to substances that repair themselves and adapt to their environment that swell and flex like muscles that repel any ink or paint and that capture and store the energy of the Sun He shows how all this is being accomplished precisely because for the first time in history materials are being made to measure designed for particular applications rather than discovered in nature or by haphazard experimentation Now scientists literally put new materials together on the drawing board in the same way that a blueprint is specified for a house or an electronic circuit But the designers are working not with skylights and alcoves not with transistors and capacitors but with molecules and atoms This book is written in the same engaging manner as Ball s popular book on chemistry Designing the Molecular World and it links insights from chemistry biology and physics with those from engineering as it outlines the various areas in which new materials will transform our lives in the twenty first century The chapters provide vignettes from a broad range of selected areas of materials science and can be read as separate essays The subjects include photonic materials materials for information storage smart materials biomaterials biomedical materials materials for clean energy porous materials diamond and hard materials new polymers and surfaces and interfaces
