

Section 3.1 – Measurements and Their Uncertainty

- A measurement is a quantity that has both a number and a unit.
- The unit typically used in the sciences are those of the International System of Measurements (SI).
- In scientific notation, a given number is written as the product of two numbers: a coefficient and 10 raised to a power.
- In scientific notation, the coefficient is always a number equal to or greater than one and less than ten.

University Physics: Australian edition Hugh D Young, Roger A Freedman, Ragbir Bhathal, 2010-08-04 This book is the product of more than half a century of leadership and innovation in physics education When the first edition of University Physics by Francis W Sears and Mark W Zemansky was published in 1949 it was revolutionary among calculus based physics textbooks in its emphasis on the fundamental principles of physics and how to apply them The success of University Physics with generations of several million students and educators around the world is a testament to the merits of this approach and to the many innovations it has introduced subsequently In preparing this First Australian SI edition our aim was to create a text that is the future of Physics Education in Australia We have further enhanced and developed University Physics to assimilate the best ideas from education research with enhanced problem solving instruction pioneering visual and conceptual pedagogy the first systematically enhanced problems and the most pedagogically proven and widely used online homework and tutorial system in the world Mastering Physics **Physics for Scientists and Engineers with Modern Physics** Douglas C.

Giancoli, 2008 Key Message This book aims to explain physics in a readable and interesting manner that is accessible and clear and to teach readers by anticipating their needs and difficulties without oversimplifying Physics is a description of reality and thus each topic begins with concrete observations and experiences that readers can directly relate to We then move on to the generalizations and more formal treatment of the topic Not only does this make the material more interesting and easier to understand but it is closer to the way physics is actually practiced Key Topics INTRODUCTION

Management Amitrajeet A. Batabyal, 2004 Although rangelands are one of the most important ecological economic systems on our planet researchers thus far have paid scant attention to the study of range management from a theoretical perspective As such this book provides a systematic approach to the theoretical study of range management under uncertainty In particular the book demonstrates how the theory of stochastic processes and the techniques of stochastic modelling can be used to construct and analyse theoretical models of jointly determined rangelands and thereby shed light on the task of range management Because specialised grazing systems involving the rotation of animals between pastures have been a major focus of range managers since the 1950s this book pays considerable attention to questions that arise when specialised grazing systems such as short duration grazing are used to manage rangelands Specific issues that are analysed in this book include the optimal number of paddocks in short duration grazing the steady state distribution of animals in short duration grazing Also the effect of potential irreversibilities the choice between the stocking rate and time herding in ranch operations and the role of time in range management is discussed
