National Bureau of Standards, 1977 Optical Radiometry and Satellite Validation Agnieszka Bialek, David Doxaran, Vittorio Ernesto Brando, Clemence Goyens, Kevin Ruddick, Ana Ines Dogliotti, 2025-08-26 Strict quality control is essential to ensure that the satellite data products routinely used for environmental monitoring of water and land surfaces are fit for purpose A crucial step in this process is the validation of the water and land surface reflectances from which the final end user products are derived The topic of radiometric validation is growing rapidly in importance both because of the advent of operational satellite missions for routine environmental monitoring and because of

the rapid expansion in the number of satellite missions including CubeSat constellations with limited cal val resources This enhanced need for radiometric validation data covering a wide VIS NIR SWIR range e g 380 2400nm preferably with a hyperspectral resolution must be met by new techniques and hardware particularly ground based automated radiometry

The Voynich Manuscript as an Example of Oligo-Agglutinative Pasigraphy, Vol. I: A Fuzzy Set Approach to Decryption
 Steve Bolton, Class III problems are considered practically unsolvable in cryptology but none has resisted cryptanalytic
 attack as persistently as the Voynich Manuscript In the first installment of this 4 volume set we present the linguistic and
 affix analysis that preceded the first complete but approximate translation of the entire manuscript This contrasts with the
 piecemeal approach of all prior solutions that resulted in wildly divergent translations of minuscule selections of the text This
 systemic attack on the entirety of the text and its unusual distributional features such as extreme platykurtia which forbid
 translation into any natural language resulted first in superior transcription stability and an equally stable symbol set based
 on intensive statistical analysis The encoding scheme employs a 20 22 letter alphabetic script that most closely resembles a
 slot and filler top down a priori pasigraphic system with oligo agglutinative features that are currently only considered a
 theoretical possibility in the linguistics field The intricate affixing system is based mainly on precise placement of single
 letters to denote case roles semantic classes and 3 primary parts of speech exhibiting a strong noun surfeit At the phrase
 level we find dominant SOV order and head final dependent marked grammar compatible with heavily formatted inline
 pharmaceutical lists these result in short ranges of actionable information which no competing solution can claim Plant
 descriptions are demoted in comparison to other herbals in favor of processing and dispensing details This approximate

solution is based on fuzzy set analysis techniques integrated with linguistic universals a wide range of common statistics Pareto and Sukhotin scores Zipf slopes Indexes of Coincidence Agglutination and Synthesis and dozens of others and many home brewed fuzzy algorithms implemented in T SQL and VB Net after the inadequacy of many advanced data mining techniques was demonstrated Our methodology was validated when the project reached an inflection point beyond which we were able to predict the identities and properties of plants based on the text alone The project ended with plausible identification candidates for 121 of 126 herbal section plants and 7 others elsewhere in the manuscript far beyond that of other published solutions An incredible 100% of the 133 identified plants have dermatological uses These can be divided into prominent subtopics like treatment of bites anthelmintics rheumatism and other musculo skeletal ailments inflammatory skin disorders external and possibly menstrual bleeding excision of blemishes application of cosmetics and cures dispensable in baths The centerpiece of the manuscript is the Rosette Folio which depicts the grand design of a medieval bathhouse keyed to specific astrological timings also defined by satellite diagrams following a precedence hierarchy Each of these uses exhibit telltale polygraph correlations that fall into a handful of semantic hierarchies constructed from highly similar bases such as skin color based diagnostic criteria remedies solutions problems diseases plant parts and the like These findings require 2 volumes to demonstrate and another volume of data and other supplementary material Despite this complexity they culminate in a drastic simplification of the script and the first ever comprehensive translation of the Voynich Manuscript in Volume IV albeit at low resolution

Measuring, Modeling and Predicting the Seismic Site Effect Yefei Ren, Giovanni Lanzano, Yadab P. Dhakal, Behzad Hassani, Kun Ji, 2024-01-25 As recognized universally by both seismology and earthquake engineering communities the amplitude and frequency content of ground motions are influenced by local site effects including the effects of near surface geologic materials surface topographic and basin effects and so on Strong linkage between seismic site effect and earthquake damage has been commonly demonstrated from many past earthquakes Therefore quantitative and reliable evaluation of the seismic site effect is one of the crucial aspects in seismic hazard assessment and risk mitigation With the significant advancement of modern seismic monitoring networks and arrays huge amounts of high quality seismic records are now being accumulated This encourages us to measure the site responses and its associated uncertainty for selected seismic stations by some record dependent approaches such as horizontal to vertical spectral ratio HVSR measurements generalized spectral inversion GIT methods etc Machine learning techniques also show significant promise in characterization of the near surface geologic properties and prediction of site response These data driven approaches help us to better understand the physics of spatial and temporal variabilities of ground motions Due to more and more site specific data being captured invoking non ergodic assumptions in seismic response analysis has recently been a topic of great interest in the community For specific site response analysis numerical simulations are carried out to model the dynamic process of seismic waves propagating and scattering in the subsurface strata With development of

modeling capacity great efforts have been taken to evaluate quantitatively the complex 2D and 3D effects on seismic site response

data *Advances in Sustainable Manufacturing* Günther Seliger, Marwan M.K. Khraisheh, I.S. Jawahir, 2011-05-27 Non renewable materials can no longer be disposed once humankind's ever increasing needs cannot be fulfilled anymore due to limited resources. Reuse and recycling become inevitable requirements for product and process design. Renewable resources must not be consumed in quantities higher than can be regained. New technologies have to be developed and applied for a Sustainable Product Development and Life Cycle Engineering to fulfill the needs of humankind, protecting public health, welfare, and environment. The 8th Global Conference on Sustainable Manufacturing brings together some of the world's leading experts to present a scientific conference in Abu Dhabi, one of the world's fastest growing economies and a global leader in the development of sustainable technologies. The conference will focus on 7 areas: Value adding by sustainable manufacturing in the UAE, Potentials of renewables, Education for sustainability engineering, Green supply chain and transportation, Microelectronics and resource efficiency, Technology driven startups, Sustainable products and manufacturing processes.
