

## Quiz 3 Study Guide: 10/5/2021

- DNA
  - Describe the structure of DNA by using appropriate terminology
    - Understand how DNA is described as a Double Helix
      - DNA is a double-helix
        - Twisted ladder
          - Sugar phosphate backbone "Rails"
          - Nitrogenous bases form "Rungs"
            - A pairs w T and C pairs with G
        - Hydrogen bonds hold the strands together
      - Explain how the monomers of DNA combine to form a DNA polymer
        - Nucleotides are monomers, consisting of 5 carbon sugar (deoxyribose) a nitrogen, and a phosphate group
        - DNA is a combination of polynucleotide chains that represent the rungs, therefore DNA is a polymer
    - Use base-pairing rules to determine a complementary strand of DNA, that is based on a given template strand
    - Compare/contrast the DNA of living organisms
      - DNA is same in both humans and bacteria, only difference being the order & "packaging"
      - Both have DNA in form of chromosomes
      - Human DNA is enclosed in nuclear envelope
      - Number of chromosomes in humans is 46, while bacteria only has a singular chromosome
      - Cells have extra chromosomes called Plasmids, and humans do not (but DNA can still be found in their cell organelles like mitochondria)
      - Transcription in prokaryotes means ribosomes translate mRNA as soon as transcription is complete, while in Eukaryotes, mRNA is usually altered
      - Called Universal because we share DNA in that all organisms use the same 4 bases; 3 nucleotide bases form an amino acid (codon)

- Label a diagram of DNA replication, identifying the location of each step in the process
  - Creates 2 precise copies of DNA molecule, starting from single original DNA molecule
- Be able to use the genetics terminology presented
  - Genes: DNA sequences that contain instructions for building proteins

### **A Guide to Teaching in the Active Learning Classroom**

Paul Baepler, J. D. Walker, D. Christopher Brooks, Kem Saichaie, Christina I. Petersen, 2023-07-03 While Active Learning Classrooms or ALCs offer rich new environments for learning they present many new challenges to faculty because among other things they eliminate the room's central focal point and disrupt the conventional seating plan to which faculty and students have become accustomed The importance of learning how to use these classrooms well and to capitalize on their special features is paramount The potential they represent can be realized only when they facilitate improved learning outcomes and engage students in the learning process in a manner different from traditional classrooms and lecture halls This book provides an introduction to ALCs briefly covering their history and then synthesizing the research on these spaces to provide faculty with empirically based practical guidance on how to use these unfamiliar spaces effectively Among the questions this book addresses are How can instructors mitigate the apparent lack of a central focal point in the space What types of learning activities work well in the ALCs and take advantage of the affordances of the room How can teachers address familiar classroom management challenges in these unfamiliar spaces If assessment and rapid feedback are critical in active learning how do they work in a room filled with circular tables and no central focus point How do instructors balance group learning with the needs of the larger class How can students be held accountable when many will necessarily have their backs facing the instructor How can instructors evaluate the effectiveness of their teaching in these spaces This book is intended for faculty preparing to teach in or already working in this new classroom environment for administrators planning to create ALCs or experimenting with provisionally designed rooms and for faculty developers helping teachers transition to using these new spaces
