

Life on Earth

Evolution of Eukaryotes to Multicellular Life

Evolution of Eukaryotic Cells

- Several different specialized prokaryotes began to live together in a **symbiotic** relationship. These cell types took on specialized functions, and became **organelles** in a larger cell.
- A **eukaryote** is a cell that contains a separate nucleus to hold its DNA and RNA.

Study Tip

To remember the difference between eukaryotes and prokaryotes, remember that **you** are a **eukaryote**. Humans are large, complex organisms whose eukaryotic cells have nuclei.

Multicellular Life

- Prokaryotes and Eukaryotes can both be multicellular.
- Multicellular life may have evolved several times throughout Earth's history.

Why It Took So Long

- Evolutionary processes are generally slow
- No evolutionary advantage to being larger and more complex
- Harsh conditions during Earth's earlier years
 - Limited atmospheric oxygen
 - Planet was too cold for complex life
 - Extinction due to global glaciations

Eukaryotic cells formed as simpler, specialized prokaryotes began working together in cells.

Concept Check

- What are the differences between eukaryotes and prokaryotes?
- How did one evolve into the other?
- Why did complex life take so long to evolve?

A Visual Guide to Ecology Diana Malizia,2017-12-15 Early humans became keen observers of nature by tracking prey identifying edible plants and noting the time of year when different plants could be gathered Humans began to learn about the relationships between living things and the environment As the field of ecology grew its focus went beyond the simple cataloging of living things in the world Ecologists also became interested in understanding how living things function and how they interrelate with one another and with the environment With the help of content rich infographics diagrams and full color nature photographs readers will learn how living things are classified the environments in which they live what ecosystems and biomes are and the place and role of humans within the biosphere [SCM Studyguide to Science and Religion](#) Jean Dorricott,2005 This undergraduate level one textbook provides an introduction to the apparently incompatible subjects of religion and science Each chapter contains references for finding out more about particular arguments be they scientific or religious areas for discussion Where particularly difficult concepts are referred to in the body of the text further explanations are provided in boxed sections

The Physics of Evolution Michael W. Roth,2023-06-06 This book provides an introduction to the significant role of physics in evolution based on the ideas of matter and energy resource flow organism self copying and ecological change The text employs these ideas to create quantitative models for important evolutionary

processes Many fields of science and engineering have come up against the problem of complex design when details become so numerous that computer power alone cannot make progress Nature solved the complex design problem using evolution yet how it did so has been a mystery Both laboratory experiments and computer simulation attempts eventually stopped evolving Something more than Darwin's ideas of heredity variation and selection was needed The solution is that there is a fourth element to evolution ecological change When a new variation is selected this can change the ecology and the new ecology can create new opportunities for even more new variations to be selected Through this endless cycle complexity can grow automatically This book uses the physics of resource flow to describe this process in detail developing quantitative models for many evolutionary processes including selection multicellularity coevolution sexual reproduction and the Serengeti Rules The text demonstrates that these models are in conceptual agreement with numerous examples of biological phenomena and reveals through physics how complex design can arise naturally This will serve as a key text on the part physics plays in evolution and will be of great interest to students at the university level and above studying biophysics physics systems biology and related fields *Biological Science* Biological Sciences Curriculum Study, 1963
