energy

Organisms obtain energy in a process called (1) cellular respiration. This process harvests electrons from carbon compounds, such as (2) glucose, and uses that energy to make (3) ATP. ATP is used to provide (4) energy for cells to do work. In (5) Glycolysis, glucose is broken down into pyruvate. Glycolysis is a(n) (6) anaerobic process because it does not require oxygen. Glycolysis takes place in the (7) cytoplasm. Two molecules of ATP and two molecules of (8) NADH are formed for every glucose molecule that is broken down. (9) aerobic respiration takes place in the (10) mitochondria. It is aerobic because the process requires (11) oxygen.

The Deep History of Ourselves

Joseph LeDoux, 2020-08-25 Longlisted for the PEN E O Wilson Literary Science Writing Award A leading neuroscientist offers

a history of the evolution of the brain from unicellular organisms to the complexity of animals and human beings today. Renowned neuroscientist Joseph LeDoux digs into the natural history of life on earth to provide a new perspective on the similarities between us and our ancestors in deep time. This page turning survey of the whole of terrestrial evolution sheds new light on how nervous systems evolved in animals, how the brain developed and what it means to be human. In *The Deep History of Ourselves*, LeDoux argues that the key to understanding human behavior lies in viewing evolution through the prism of the first living organisms. By tracking the chain of the evolutionary timeline, he shows how even the earliest single cell organisms had to solve the same problems we and our cells have to solve each day. Along the way, LeDoux explores our place in nature, how the evolution of nervous systems enhanced the ability of organisms to survive and thrive, and how the emergence of what we humans understand as consciousness made our greatest and most horrendous achievements as a species possible.

Statistical Mechanics: Entropy, Order Parameters, and Complexity James P. Sethna, 2021-01-26. Statistical mechanics is our tool for deriving the laws that emerge from complex systems. Sethna's text distills the subject to be accessible to those in all realms of science and engineering, avoiding extensive use of quantum mechanics, thermodynamics, and molecular physics. Statistical mechanics explains how bacteria search for food and how DNA replication is proof read in biology, optimizes data compression and explains transitions in complexity in computer science, explains the onset of chaos and launched random matrix theory in mathematics, addresses extreme events in engineering and models pandemics and language usage in the social sciences. Sethna's exercises introduce physicists to these triumphs and a hundred others, broadening the horizons of scholars both practicing and nascent. Flipped classrooms and remote learning can now rely on 33 pre-class exercises that test reading comprehension. Emergent vs fundamental Weirdness in high dimensions. Aging, entropy and DNA and 70 in-class activities that illuminate and broaden knowledge. Card shuffling, Human correlations, Crackling noises. Science is awash in information, providing ready access to definitions, explanations, and pedagogy. Sethna's text focuses on the tools we use to create new laws and on the fascinating simple behavior in complex systems that statistical mechanics explains.
