

## Chapter 2 Properties of Matter

**Section 2.2 Physical Properties****(pages 45–51)**

*This section discusses physical properties and physical changes. It also explains how physical properties can be used to identify materials, select materials, and separate mixtures.*

**Reading Strategy (page 45)**

**Building Vocabulary** As you read, write a definition for each term in the table below. For more information on this Reading Strategy, see the **Reading and Study Skills** in the **Skills and Reference Handbook** at the end of your textbook.

Defining Physical Properties	
Physical Property	Definition
Viscosity	The tendency of a liquid to resist flowing
Malleability	The ability of a solid to be hammered without shattering
Melting Point	The temperature at which a solid changes to a liquid

**Examples of Physical Properties (pages 45–47)**

1. A physical property is any characteristic of a material that can be observed or measured without changing the composition of the substances in the material.
2. Explain why a wooden spoon is a better choice than a metal spoon for stirring a boiling pot of soup. The handle of a wooden spoon will stay cool because wood is not a good conductor of heat.
3. Is the following sentence true or false? A liquid with a high viscosity flows more slowly than a liquid with a low viscosity at the same temperature. true
4. Is the following sentence true or false? Discovering which of two materials can scratch the other is a way to compare the hardness of the materials. true

Match each term to its definition.
