Ellingwood,James R. Shaver,1976 Methods for analytically predicting the behavior of simply supported reinforced concrete beams subjected to fire are presented This is generally a two step process involving a thermal analysis followed by a stress analysis This study emphasizes the latter wherein the determination of moment curvature time relationships for the beam cross section incorporates the temperature dependent strength degradation in the steel and concrete as well as thermal and creep strains The sensitivity of the predictions to various phases of analytical modeling is investigated to establish the parameters most important for the prediction of beam behavior and to indicate where additional data should be gathered A comparison of predicted behavior with that observed in fire tests shows excellent agreement when realistic reinforcement temperature histories are used      **ASME Guide for Gas Transmission and Distribution Piping Systems, 1986** American Society of Mechanical Engineers,1986      *NBS Building Science Series* United States. comprehensive coverage on how the performance of plastics is characterized during design property testing and failure analysis. The fundamental structure and properties of plastics are reviewed for general reference and detailed articles describe the important design factors, properties, and failure mechanisms of plastics. The effects of composition, processing, and structure are detailed in articles on the physical, chemical, thermal, and mechanical properties. Other articles cover failure mechanisms such as crazing and fracture, impact loading, fatigue failure, wear, failures, moisture-related failure, organic chemical-related failure, photolytic degradation, and microbial degradation. Characterization of plastics in failure analysis is described with additional articles on analysis of structure, surface analysis, and fractography.

New chapters added specifically cover polyamides, polyimides, and polyesters. Hot topics such as 3D printing and smart plastics are also included, giving plastics engineers the information they need to take these embryonic technologies and deploy them in their own work. With the increasing demands for lightness and fuel economy in the automotive industry, not least due to CAF standards, plastics will soon be used even further in vehicles. A new chapter has been added to cover the technology trends in this area, and the book has been substantially updated to reflect advancements in technology, regulations, and the commercialization of plastics in various areas. Recycling of plastics has been thoroughly revised to reflect ongoing developments in the sustainability of plastics. Extrusion processing is constantly progressing, as have the elastomeric materials.
