**I. Scale Description**

Self-Report of Delinquency instruments are well known and frequently used. Their advantages and disadvantages have been discussed in the literature (Huizinga and Elliott, 1986; Klein, 1988). The latter reference is a book containing several chapters of interest. The Self-Report of Delinquency (SRD) used in the Fast Track Project was previously used for the Pittsburgh Youth Study. In the SRD, participants describe their delinquent activities, tapping the areas of property damage, theft, assault, and substance use. For each type of delinquent act, the participant is asked whether he/she ever committed it, how many times in the past year, if others were involved, and if he/she was under the influence of alcohol or drugs while committing it.

**II. Report Sample**

Analyses were conducted on Cohort 1 year 12 normative (n=387) and Cohort 1 high-risk control samples (n=155, overlap is 79). One hundred nineteen students were missing the entire measure (26% of the sample), including 105 from the normative sample (27% of the sample) and 44 of the control sample (28% of the sample). The non-respondents included 17 students
