Sounding Human Deirdre Loughridge tests and traverses these boundaries unmaking the human or machine logic and seeking out others better characterized by conjunctions such as and or with Sounding Human enters the debate on posthumanism and human machine relationships in music exploring how categories of human and machine have been continually renegotiated over the centuries Loughridge expertly traces this debate from the 1737 invention of what became the first musical android to the creation of a sound wave instrument by a British electronic music composer in the 1960s and the chopped and pitched vocals produced by sampling singers voices in modern pop music From music generating computer programs to older musical instruments and music notation Sounding Human shows how machines have always actively shaped the act of music composition In doing so Loughridge reveals how musical artifacts have been or can be used to help explain and contest what it is to be human

David Hopkin, Paul Stager, 2013-06-29 Despite its increasing importance the verification and validation of the human machine interface is perhaps the most overlooked aspect of system development Although much has been written about the design and development process very little organized information is available on how to verify and validate highly complex and highly coupled dynamic systems Inability to evaluate such systems adequately may become the limiting factor in our ability to employ systems that our technology and knowledge allow us to design This volume based on a NATO Advanced Science Institute held in 1992 is designed to provide guidance for the verification and validation of all highly complex and coupled systems Air traffic control is used as an example to ensure that the theory is described in terms that will allow its implementation but the results can be applied to all complex and coupled systems The volume presents the knowledge and theory in a format that will allow readers from a wide variety of backgrounds to apply it to the systems for which they are responsible The emphasis is on domains where significant advances have been made in the methods of identifying potential problems and in new testing methods and tools Also emphasized are techniques to identify the

assumptions on which a system is built and to spot their weaknesses **InfoWorld** ,1989-08-21 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects
