Technologies and Innovations for Sustainable Future in Building Education and Practice is closely related to a flagship national research programme funded by the Government of New Zealand known as the CanConstructNZ research programme aiming to balance the capacity and capability in the construction industry and the national pipeline of construction projects. The capacity and capability of our construction industry in fulfilling the construction needs of the whole nation are reflected in the national pipeline of construction projects and have long been recognised as one of the main challenges facing the construction sector. The practices and education of building and construction play an important role in determining the capacity and capability of the construction industry. Within the context of achieving sustainable future and embracing advanced technologies to create capacity and capability in the construction sector, various concepts, research and innovative development have emerged and taken place. This particular conference theme has facilitated more in-depth discourses and discussions on the latest ideas and innovation within the building and construction education and practice, not only from the Australasian region but also from the wider international community including the USA, the UK, Brazil, South Africa, Nigeria, China and Sri Lanka. The contents of this book will be of interest to academic researchers, industry professionals and policy makers alike.

Lean Construction 4.0 Vicente A. González, Farook Hamzeh, Luis Fernando Alarcón, 2022-12-30. This book introduces and develops the novel concept of Lean Construction 4.0. The capability of Lean Construction to effectively adapt the architecture, engineering, construction (AEC) industry to this new era of digital transformation requires a reconceptualization of the triad: people, processes, technology, as a foundation for the theoretical and practical framework of Lean Construction. Therefore, a shift towards Lean Construction 4.0 is required. Lean Construction 4.0 is a new, systems-wide thinking approach where synergies and overlaps between Lean Construction and digital smart technologies go far beyond BIM to reshape the way we design, manage and operate capital projects in the modern age of automation. This pioneering new book brings together the views of world experts at the interface of Lean Construction and digital smart technologies in order to channel research efforts to introduce and discuss current research and practice challenges and drivers and future perspectives of Lean Construction 4.0. It is not the aim of the book to keep adding digits to the term Lean Construction to catch up with the industry revolutions as they go on. Instead, after reading this book, it will be undeniable for readers that the triad: process, people, technology, as proposed by Lean Construction 4.0, is required to achieve an effective, long-lasting digital transformation of the AEC industry. Thus, the aim of Lean Construction 4.0 is better explained by what it evokes: a future vision of construction systems comprising people, processes and technology, using Industry 4.0/5.0 as a basis for technological innovation in the AEC industry, coupled with Lean Construction theory and practice as a jettison for improved processes and systems integration. The Lean Construction 4.0 concept, coined and developed in this edited book, is unique, and the chapters provide practitioners and academics with a provocative reflection on the theoretical and practical aspects that shape the Lean Construction 4.0 concept. More importantly, Lean Construction 4.0 proposes a rationale for the
