

COMPOSITIONS OF TRANSFORMATIONS

Notes & Practice

When two or more transformations are combined to form a new transformation, the result is called a **composition**. In a composition, the first transformation produces an image upon which the second transformation is then performed.

1. In the diagram, $\triangle ABC$ is $\triangle DEF$. Which sequence of transformations maps $\triangle ABC$ onto $\triangle DEF$?

- (A) A reflection over the x -axis followed by a translation.
 (B) A reflection over the y -axis followed by a translation.
 (C) A rotation of 180° about the origin followed by a translation.
 (D) A counterclockwise rotation of 90° about the origin followed by a translation.

2. Triangle ABC has coordinates $A(1, 2)$, $B(4, 2)$, and $C(3, 4)$. Graph and label the coordinates of $\triangle A'B'C'$, the image of $\triangle ABC$ after reflecting over the x -axis followed by a counterclockwise rotation of 90° centered at the origin.

What single transformation would map $\triangle ABC$ to $\triangle A'B'C'$?

Transformations Geometry Art Lesson:

Geometry by Its Transformations Christopher Baltus, 2025-02-07 This textbook combines the history of synthetic geometry centered on the years 1800-1855 with a theorem proof exposition of the geometry developed in those years. The book starts with the background needed from Euclid's Elements followed by chapters on transformations including dilation, similitude, homology, homogeneous coordinates, projective geometry, inversion, the Möbius transformation, and transformation geometry as in French schoolbooks of 1910. Projective geometry is presented by tracing its path through the work of J. V. Poncelet, J. Steiner, and K. G. C. von Staudt. Extensive exercises are included, many from the period studied. The prerequisites for approaching this course are knowledge of high school geometry and enthusiasm for mathematical demonstration. This textbook is ideal for a college geometry course for self study or as preparation for the study of modern geometry.

Specifically, Kalin shares the perspectives of educators as they investigate the teaching and learning of drawing within their own elementary classrooms and within the context of an action research group. The innovative and topographic design of the project provides a rich balance between the arts and educational research as it allows for the complex unfolding of relational transformation alongside the artistic renditions of each person exploring their understandings of drawing. The products and processes of this book provide alternative approaches for the design of future pre-service and in-service programs that aim to serve teachers as learners rather than teachers as teachers. In this vein, the book offers worthy insights into how the arts and collaborative action research groups assist participants in finding other ways of seeing, imaging, and knowing the world. The book will appeal to practitioners, teacher educators, educational researchers, as well as those interested in professional development, complexity thinking, curriculum studies, collaborative action research, and arts based educational research methodologies. *How to do Action Research for Transformations* Bradbury, Hilary, 2022-06-10 Capturing years of
