

Your Revo is equipped with the TQi radio system. The TQi is a 3-channel system that provides control for up to three outputs. Revo is equipped with two high-torque steering servos connected via dual Channel 1 outputs. The TQi works in conjunction with the OptiDrive™ Electronic Shift Module to monitor and control the input and output signals for the throttle and shifting servos channels. The OptiDrive monitors the voltage of the on-board RX Power Pack. The "Function" LED will flash red if the battery voltage is too low.

TRANSMITTER AND RECEIVER

REVO WIRING DIAGRAM

If the transmitter status LED doesn't light green, check the polarity of the batteries. If you see any other flashing signal from the LED, refer to the chart on page 44 to identify the code.

When rechargeable batteries begin to lose their charge, they will fade much faster than alkaline dry cells. Stop immediately at the first sign of weak batteries. Never turn the transmitter off when the battery pack is plugged in. The model could run out of control.
