Specification and Transformation of Programs Helmut A. Partsch,1990-07-05 Specification and transformation of programs is short for a methodology of software development where from a formal specification of a problem to be solved programs correctly solving

that problem are constructed by stepwise application of formal semantics preserving transformation rules The approach considers programming as a formal activity Consequently it requires some mathematical maturity and above all the will to try something new A somewhat experienced programmer or a third or fourth year student in computer science should be able to master most of this material at least this is the level I have aimed at This book is primarily intended as a general introductory textbook on transformational methodology As with any methodology reading and understanding is necessary but not sufficient Therefore most of the chapters contain a set of exercises for practising as homework Solutions to these exercises exist and can in principle be obtained at nominal cost from the author upon request on appropriate letterhead In addition the book also can be seen as a comprehensive account of the particular transformational methodology developed within the Munich CIP project

Transformations in Medieval and Early-Modern Rights Discourse Virpi Mäkinen, Petter Korkman, 2006-02-27 Rights language is a fundamental feature of the modern world Virtually all significant social and political struggles are waged and have been waged for over a century now in terms of rights claims In some ways it is precisely the birth of modern rights language that ushers in modernity in terms of moral and political thought and the struggle for a modern way of life seems for many synonymous with the fight for a universal recognition of equal individual human rights Where did modern rights language come from What kinds of rights discourses is it rooted in What is the specific nature of modern rights discourse when and where were medieval and ancient notions of rights transformed into it Can one in fact find any single such transformation of medieval into modern rights discourse This book brings together some of the most central scholars in the history of medieval and early modern rights discourse Through the different angles taken by its authors the volume brings to light the multifaceted nature of rights languages in the medieval and early modern world *Research in Education* ,1966 The Transformation of Property Regimes and Transitional Justice in Central Eastern Europe Liviu Damşa, 2017-01-03 This volume examines the property transformations in post communist Central Eastern Europe CEE and focuses on the role of restitution and privatisation in such transformations It argues that the theorisation of restitution in post communist CEE is incomplete in the transitional justice scholarship and in the literature on correction of historical wrongs The book also argues that for a more complete theorisation of post communist restitution the transformations of property in post communist societies ought to be studied in a more holistic way The main legal vehicles used for such transformations privatisation and restitution should not be studied separately and in abstract but in their reciprocal relationship and in connection to the dimension of justice which each could achieve Finally the book integrates privatisation in a theory of post communist transformation of property

Direct Instruction: A practitioner's handbook Kurt Engelmann, 2024-04-05

Direct Instruction (DI) is a powerful instructional approach designed to ensure that students master critical skills and content required for more advanced learning. Although DI has existed since the late 1960s, there are many common misconceptions about the approach, its potential to enhance student learning, and the way its proper implementation facilitates students' academic success. This book provides a systematic explanation of the Direct Instruction methodology and DI program design as it outlines a roadmap for teachers and school leaders on how to implement DI successfully. Divided into three main sections, the first section describes DI as a coherent and complete teaching and learning system that contrasts DI with lower case direct or explicit instruction, which focuses on effective instructional delivery techniques. The second section provides a step by step guide to implementing DI. The third section is devoted to cautions about implementing DI. This section reinforces the notion that the physical possession of the DI curricula does not by itself lead to student success. Those who adopt DI need to ensure that it is implemented with fidelity for the benefit of their students who are reliant on them to provide them with the means to achieve their academic potential so they may lead healthy, productive lives.
