Photography, Umstead State Park, North Carolina Clarence J. DeMars, Pacific Southwest Forest and Range Experiment Station (Berkeley, Calif.), 1982 In 1975 1976 pine trees killed by the southern pine beetle *Dendroctonus frontalis* Zimm in a 2170 hectare 5362 acre area at the William B Umstead State Park in central North Carolina were monitored by sequential color infrared aerial photography From 1973 through summer 1975 beetles in 350 infestation spots killed more than 20 500 pines on 137 hectares 339 acres From October 1975 to July 1976 an additional 301 dead pines were detected at 146 tree mortality centers Southern pine beetles were associated with 98 percent of these dead trees Pine mortality dropped rapidly from 248 trees killed in fall and winter at 120 spots to 9 trees killed in July at six spots The volume of timber killed during the outbreak exceeded 16 000 m³ 7500 cords of roundwood valued at more than 240 000 Strictly speaking this is not an economic loss because the Park s management goal is to maintain a natural forest

Commercial Morel Harvesters and Buyers in Western Montana Rebecca Jean McLain, 2005 This exploratory study examined aspects of the social organization of the commercial wild morel industry in western Montana during 2001 We talked with 18 key informants 7 buyers and 11 pickers and observed social interactions at one buying station near the Kootenai National Forest and three buying stations near the Bitterroot National Forest The key informant and observational data permitted us to construct a picture of social interactions at field buying stations buyer strategies for attracting pickers changes in prices over the course of a season and the ways in which various participants in the wild morel harvest construct their livelihoods In the discussion we contrast our findings with the results of a recently published study on nontimber forest product harvesters in the Eastern United States We end the report with a discussion of management implications for managers and scientists
