CLASSZONE.COM

Connect Each of us enters this world as a screaming infant. At first, the ability to eat solid foods or take a step draws forth great praise. These general skills rapidly lose their wonder, however, and by the time you reach the age of 18, everyone wants to know what you plan to do with yourself. Will you build houses or design clothing or treat patients? What will your specialty be? Cells, too, undergo specialization to carry out the complex functions required by the body.

MAIN IDEA

Multicellular organisms depend on interactions among different cell types.

Within multicellular organisms, cells communicate and work together in groups that form increasingly larger, more complex structures. This arrangement progresses from cells to tissues to organs to organ systems, as shown in **FIGURE 5.16**. **Tissues** are groups of cells that work together to perform a similar function. Groups of tissues that work together to perform a specific function or related functions are called **organs**. For instance, plants have photosynthetic tissues made of chlorophyll-containing cells. Conductive tissues transport sugars, water, and minerals to and from other parts of the plant. Protective tissues help prevent water loss. Together, these and other tissues form a leaf, the plant's food-producing organ.

Organs that carry out similar functions are further grouped into **organ systems**. In plants, the shoot system is above the ground. It includes stems that support the plant, leaves that capture radiant energy, and flowers that aid reproduction. Beneath the ground, the root system has different types of roots and root hairs that anchor the plant and absorb water and minerals.

As organ systems work together, they help an organism maintain homeostasis. For example, plants need to maintain a certain level of water within their cells, or they will wilt and die. They absorb water through their roots and expel it as water vapor through openings in their leaves called stomata. Stomata are controlled by special cells called guard cells, which close the stomata when a plant's water intake cannot keep up with its water loss.

Apply Suppose your family goes out of town and forgets to ask your neighbor to water the plants. Do you think the plants' stomata will be open or closed? Explain.

Connecting CONCEPTS

Homeostasis As you learned in Chapter 1, homeostasis is the maintenance of a stable internal environment. Both an organism's physiology and its behavior help it achieve homeostasis.

Microbial Life Jerry Darson, Microbial life often unseen by the naked eye is a vital part of our world It encompasses a wide range of organisms including bacteria archaea fungi and viruses all of which have been essential for the development and sustainability of life on Earth The study of microbial life or microbiology has revealed that these tiny organisms are not only among the oldest forms of life but also some of the most diverse capable of thriving in environments ranging from extreme heat to the frigid depths of the oceans The concept of microbial life dates back to the 17th century when pioneers like Antonie van Leeuwenhoek first observed microorganisms using a simple microscope His discoveries led to the realization that the world was far more complex than previously imagined This marked the beginning of microbiology as a scientific field though it wasn't until the 19th century that figures like Louis Pasteur and Robert Koch made groundbreaking contributions proving the role of microorganisms in disease and fermentation Microbes are incredibly diverse and can be found in almost every environment on Earth Some live in symbiotic relationships with plants animals and humans providing essential functions like nitrogen fixation or aiding in digestion Others are pathogenic causing diseases in both humans and animals but they are just a small fraction of the total microbial world In fact microbes outnumber all other forms of life combined with a single gram of soil or a drop of water containing billions of these tiny organisms Multicellularity Karl J.
