Nuclear Weapons Materials Gone Missing Henry Sokolski,2014-11-01 Ever since President Barack Obama made securing nuclear weapons assets a top priority for his global arms control agenda guarding and disposing of these holdings have become an international priority Every 2 years high profile nuclear summits on how to prevent nuclear theft and sabotage have been held the first in Washington DC the second in Seoul South Korea and the third in The Hague the Netherlands With each summit more and more states have agreed to dispose of what weapons grade nuclear fuels they have In between these meetings scores of studies have been commissioned and nearly as many workshops official and unofficial have been held Yet

in all of this almost no attention has been focused on what to do about the nuclear weapons usable plutonium and highly enriched uranium that we have lost track of This is odd The Nuclear Terrorism Threat Brecht Volders,2021-07-08 This book examines the threat of a terrorist organisation constructing and detonating a nuclear bomb It explores the role and impact of the organisational design of a terrorist organisation in implementing a nuclear terrorism plot In order to do so the work builds on the organisational analogy between an assumed nuclear terrorism scenario and four case studies as follows the construction of the first atomic bombs at Los Alamos South Africa s Peaceful Nuclear Explosives PNE program Aum Shinrikyo s chemical biological armament activities and Al Qaeda s implementation of the 9 11 attacks Extrapolating insights from these case studies this book introduces the idea of an effectiveness efficiency trade off On the one hand it will be argued that a more organic organisational design is likely to benefit the effective implementation of a nuclear terrorism project On the other hand this type of organic organisational design is also likely to simultaneously constitute an inefficient way for a terrorist organisation to guarantee its operational and organisational security It follows then that the implementation of a nuclear terrorism plot via an organic organisational design is also likely to be an inefficient strategy for a terrorist organisation to achieve its strategic and political goals This idea of an effectiveness efficiency trade off provides us with a tool to strengthen the comprehensive nature of future nuclear terrorism threat assessments and sheds new light on the ongoing debates within the nuclear terrorism literature This book will be of particular interest to students of nuclear proliferation terrorism studies international organisations and security studies in general **Nuclear Terrorism** Graham Allison,2004-08-09 But Allison does more than weave a tale of doom because his second proposition is that nuclear terrorism is preventable He outlines an ambitious but feasible strategy by which we can essentially eliminate the danger of nuclear terrorism BOOK JACKET **The Politics of Weapons Inspections** Nathan E. Busch,Joseph F. Pilat,2017-03-21 Given recent controversies over suspected WMD programs in proliferating countries there is an increasingly urgent need for effective monitoring and verification regimes the international mechanisms including on site inspections intended in part to clarify the status of WMD programs in suspected proliferators Yet the strengths and limitations of these nonproliferation and arms control mechanisms remain unclear How should these regimes best be implemented What are the technological political and other limitations to these tools What technologies and other innovations should be utilized to make these regimes most effective How should recent developments such as the 2015 Iran nuclear deal or Syria s declared renunciation and actual use of its chemical weapons influence their architecture The Politics of Weapons Inspections examines the successes failures and lessons that can be learned from WMD monitoring and verification regimes in order to help determine how best to maintain and strengthen these regimes in the future In addition to examining these regimes technological political and legal contexts Nathan E Busch and Joseph F Pilat reevaluate the track record of monitoring and verification in the historical cases of South Africa Libya and Iraq assess the prospects of using these mechanisms in verifying arms control

and disarmament and apply the lessons learned from these cases to contemporary controversies over suspected or confirmed programs in North Korea Iran and Syria Finally they provide a forward looking set of policy recommendations for the future

The 2017 Nuclear Ban Treaty Joseph A. Camilleri, Michael Hamel-Green, Fumihiko Yoshida, 2020-05-21 Rising concern over the increasing threat of nuclear war impelled the 2017 United Nations UN negotiations and adoption by 122 UN member states of a Treaty on the Prohibition of Nuclear Weapons The Treaty seeks to ban nuclear weapons globally in the same way chemical and biological weapons have already been prohibited This book provides the first in depth comprehensive analysis of the implications and possibilities of the new treaty drawing on the insights of international relations international laws and disarmament experts and specialists from Europe America the Asia Pacific and the UN In a context where existing nuclear weapon states have so far declined to be party to the new treaty the book examines not only its emergence and significance but also the prospects and possibilities for its implementation the challenges associated with verifying the new agreement the role of both civil society and governments and the treaty's wider implications in addressing regional and global nuclear threats This book was originally published as a special issue of Global Change Peace Security but additionally includes the special section articles on the treaty in the Journal for Peace and Nuclear Disarmament

Custom Maid War for New World Disorder Peter De Krassel, 2005-08 Following on from Custom Maid Spin Peter de Krassel turns his unique international perspective and controversial pen onto the business of war In the course of reviewing the conflicts of the 20th century and today he argues that to end or at least minimize the cycle of 21st century violence humanity is inflicting on itself America must lead the peaceful charge for change To do so Americans need to learn and understand the reasons for war and how future wars can be stopped War is no the answer to hunger oil territorial expansion ethnic cleansing or the survival of America On the contrary it is its escalating destructive downfall He points to China's re emergence as a global power as America's greatest challenge and one that must be resolved peacefully America must keep in mind the warning by the Greek historian Thucydides more than 2 000 years ago that belief in the inevitability of conflict can become one of its main causes In other words America cannot afford to become a victim of its own political spin Peter de Krassel's treatment on war reads like a journalistic account of Heart of Darkness We are like Marlow journeying down a political river with each chapter forcing us to shed another layer of ignorance in order to acquire new insight But this work also brings with it a sense of hope for we the people are capable of molding our own destiny as long as we have the wisdom and courage to change things

Brandon Royal Author The Little Red Writing Book An anecdotal and passionate polemic on modern history An unabashed racy weltanschauung that would not sit well on a White House shelf

media **Lost Nuclear Weapons** James C Oskins, John Taschner, 2013-11-15 This book tells the true story of nuclear weapons and nuclear components that have been lost or destroyed by U S and Soviet sources Many of the myths surrounding these lost destroyed nuclear weapons are dispelled by the contents of this book Preventing Black Market Trade in Nuclear Technology Matthew Bunn, William C. Potter, Leonard S. Spector, Martin B. Malin, 2018-03-31 Every nuclear weapons program for decades has relied extensively on illicit imports of nuclear related technologies This book offers the most detailed public account of how states procure what they need to build nuclear weapons what is currently being done to stop them and how global efforts to prevent such trade could be strengthened While illicit nuclear trade can never be stopped completely effective steps to block illicit purchases of nuclear technology have sometimes succeeded in slowing nuclear weapons programs and increasing their costs giving diplomacy more chance to work Hence this book argues preventing illicit transfers wherever possible is a key element of an effective global non proliferation strategy *Fracture Lines* David Wandless, 2010-09-06 The Tsunami and earthquake which struck the Indian Ocean and surrounding countries on 26th December 2004 was one of the worst natural disasters in recent memory killing more than 225 000 people in 11 countries But what if it wasn't an accident Thirty years ago at the height of a population explosion a group of young idealistic scientists set out on a quest to protect the Earth from the excesses of mankind itself Aware that the short termism of successive Governments would do little to solve the problems they become self appointed guardians Their trials are destined to lead them to the edge of sanity In bringing their plans to fruition they face the ultimate conundrum can they in good conscience destroy huge swathes of Antarctica to save the Earth for future generations As their plans come to fruition will Trey Brown self imposed protector of the ice fields or the FBI and the US Government be able to stop them or is the planet destined to be reshaped by their hands *Deterring State Sponsorship of Nuclear Terrorism* Michael A. Levi, 2008 The basis of nuclear doctrine during the Cold War was deterrence Nuclear powers were deterred from attacking each other by the fear of retaliation Today much of the concern over possible nuclear attack comes in the context of rogue states and terrorism And since only states are known to possess nuclear weapons an important question is how to deter them from letting terrorists acquire a device whether through an authorized transfer or a security breach Michael A Levi analyzes this aspect of deterrence in the post Cold War world as well as what to do if deterrence breaks down He suggests how to discourage states from giving weapons or nuclear materials to terrorists and how to encourage states to bolster security against any accidental transfer The report also discusses the role of nuclear attribution the science of identifying the origin of nuclear materials in deterring transfers an essential link in assigning responsibility to governments for transfers of nuclear materials *Deterring State Sponsorship of Nuclear Terrorism* offers thoughtful analysis and practical guidelines for U S policy on a complex and important question and makes an important contribution to the thinking in an underexplored but unavoidable area of the post Cold War security debate *Designing Denuclearization* Bruce Larkin, 2018-02-06 This work canvasses nuclear weapon

abolition proposals placed on the table since 1945 and the obstacles and issues which a realistic program for abolition confronts today It has an ambitious purpose to show that nuclear abolition can and should be placed on the public agenda a The author terms it interpretive in that it incorporates his commentaries never hiding his reasons and judgments It is neither just the facts nor all the facts It is an encyclopedia in the original meaning of a general course of instruction He identifies himself with all who pursue the problem posed by nuclear weapons systematically and with seriousness of purpose committed to self instruction In another sense he writes this work is a conversation with the Reader What is needed to abolish nuclear weapons His starting point is this As long as nuclear weapons are stockpiled and deployed there is risk of their use which would be catastrophic Abolition however is inconceivable in the absence of a developed and articulated alternative to the nuclear status quo Even with that the politics of abolition bringing the governments of the nuclear weapon states to believe that abolition is in their interest is the sine qua non of achieving a world free of nuclear weapons Larkin s text is written for those whether practitioners or citizens interested in designing and bringing about denuclearization Abolition cannot be achieved by political elites in the absence of broad concurrent public support Governments career policy officials and legislators have chosen to assume responsibility for the public agenda They may be asked must be asked what they will do to bring about denuclearization

Nuclear Power or a Promise Lost Edward T. Burns, 2020-05-01 This book captures the status of current electrical energy markets including the principal forces affecting decisions on selecting an energy source It represents a seminal work that lays out the electrical energy decision tree for selecting an energy source in a world that is on the verge of catastrophic global warming because of the choices that have been made in the name of cheap energy The impetus for this book includes the dire need to mitigate continued anthropogenic causes of global warming by turning to carbon free energy sources Nuclear energy represents such a carbon free energy source and could be a partial solution to the existential threat facing future society the threat of a warming planet and its consequential catastrophic effects on future generations The world is at a crossroads in human interaction with their environment The effects of radiation and the relationship of nuclear power to nuclear weapons are both discussed in an understandable and compelling manner Nuclear energy is contrasted with other energy sources including fossil fuels and renewable energy sources regarding the risks and benefits imposed by each Important personalities and world events that shaped nuclear power s development are recounted The historical origins of nuclear power are outlined and the continued impetus to include nuclear power as part of the electric grid energy mix is assessed exposing the obstacles and road blocks to the continued use of nuclear power Specific attention is paid to revealing the causes and lessons learned from the three severe accidents in commercial nuclear plants TMI 2 Chernobyl and Fukushima An extensive discussion of nuclear waste disposal is provided as part of the decision tree for energy selection The context for the future of nuclear power as a viable energy source is illuminated by the current battle between economic growth and the harm created by burning fossil fuels The status of the

world's climate and projections for the disruptive effects of global warming on future populations migration economics and world strife are debated against the backdrop of an increasing world population and the drive by developing nations to achieve economic parity with the industrialized nations Within the context of increased world strife the quest by nations to obtain nuclear weapons is also discussed The steps taken by the world to limit nuclear weapons proliferation are examined with emphasis on potential links between nuclear power generation and access to nuclear weapons The final chapter discusses the moral responsibility of current generations with respect to future generations specifically the applicability of intergenerational equity in political and social decision making regarding the actions that add to global warming and those risk averse actions that can be taken to minimize global warming

Abolishing Nuclear Weapons George Perkovich, 2017-10-03 Nuclear disarmament is firmly back on the international agenda But almost all current thinking on the subject is focused on the process of reducing the number of weapons from thousands to hundreds This rigorous analysis examines the challenges that exist to abolishing nuclear weapons completely and suggests what can be done now to start overcoming them The paper argues that the difficulties of getting to zero must not preclude many steps being taken in that direction It thus begins by examining steps that nuclear armed states could take in cooperation with others to move towards a world in which the task of prohibiting nuclear weapons could be realistically envisaged The remainder of the paper focuses on the more distant prospect of prohibiting nuclear weapons beginning with the challenge of verifying the transition from low numbers to zero It moves on to examine how the civilian nuclear industry could be managed in a nuclear weapons free world so as to prevent rearmament The paper then considers what political security conditions would be required to make a nuclear weapons ban enforceable and explores how enforcement might work in practice Finally it addresses the latent capability to produce nuclear weapons that would inevitably exist after abolition and asks whether this is a barrier to disarmament or whether it can be managed to meet the security needs of a world newly free of the bomb
